PREFACE	<i>xi</i>
GLOSSARIES	<i>xv</i>
1 INTRODUCTION	<i>1</i>
1.1 Feedback Control	1
1.2 Classification of Feedback Control Systems	2
1.3 Performance Specifications and Design Procedure	9
1.4 Mathematical Models	12
1.5 Summary	14
References	14
2 MATHEMATICAL MODELING OF CONTROL SYSTEM COMPONENTS	<i>15</i>
2.1 Introduction	15
2.2 Transfer-Function and State-Variables Representations	16
2.3 Mechanical Elements	23
2.4 Electrical Elements	31
2.5 Hydraulic Elements	35
2.6 Pneumatic Elements	42
2.7 Thermal Elements	47
2.8 Analogies	52
2.9 Actuators	53

- 2.10 Summary 66
- References 66
- Problems 67

3 MATHEMATICAL MODELING OF CONTROL SYSTEMS 76

- 3.1 Introduction 76
- 3.2 Transfer-Function and State-Variables Representations 77
- 3.3 Passive Control Systems 80
- 3.4 Electrical Control Systems 85
- 3.5 Hydraulic Control Systems 96
- 3.6 Pneumatic Control Systems 104
- 3.7 Multivariable Control Systems 108
- 3.8 Summary 111
- References 112
- Problems 112

4 TRANSIENT RESPONSE OF CONTROL SYSTEMS 120

- 4.1 Introduction 120
- 4.2 State-Variables Representation 121
- 4.3 Solution of Initial-Value Problem 122
- 4.4 Forced Response 129
- 4.5 Step and Impulse Response 134
- 4.6 Transformation of State Variables 145
- 4.7 Summary 151
- References 151
- Problems 152

5 FREQUENCY RESPONSE 155

- 5.1 Introduction 155
- 5.2 Frequency-Response Function 156
- 5.3 Bode Diagrams 161
- 5.4 Filter Characteristics 172
- 5.5 Performance Specifications in the Frequency Domain 176
- 5.6 Modeling from Experimental Frequency Response 179
- 5.7 Summary 184
- References 185
- Problems 185

6 STABILITY AND ROOT LOCUS 190

- 6.1 Introduction 190
- 6.2 Definitions of Stability 191
- 6.3 Routh Criterion 194

- 6.4 Relative Stability by the Routh Criterion 201
- 6.5 The Root-Locus Method 203
- 6.6 Procedure for Construction of the Root Locus 206
- 6.7 Sensitivity of Roots to Parameter Variations 218
- 6.8 Summary 222
 - References 222
 - Problems 222

7 CONTROLLER DESIGN WITH OUTPUT FEEDBACK

226

- 7.1 Introduction 226
- 7.2 System Types 227
- 7.3 Steady-State Errors 230
- 7.4 Control Laws 238
- 7.5 Implementation of Control Laws with Electronic Controllers 244
- 7.6 Adjustment of Controller Gains 249
- 7.7 Compensation 256
- 7.8 Multivariable Systems 260
- 7.9 Summary 264
 - References 264
 - Problems 265

8 CONTROLLER DESIGN WITH STATE FEEDBACK

270

- 8.1 Introduction 270
- 8.2 Performance Specifications and Root Locations 271
- 8.3 Controllability 274
- 8.4 Control Law Design 278
- 8.5 Observability 292
- 8.6 Observer Design 295
- 8.7 Summary 300
 - References 301
 - Problems 302

9 DIGITAL CONTROL

304

- 9.1 Introduction 304
- 9.2 Mathematical Modeling of Digital Control Systems 305
- 9.3 Discrete-Time Models of the Plant 316
- 9.4 Digital Controller Design with Output Feedback 324
- 9.5 Closed-Loop Response 329
- 9.6 Stability 337
- 9.7 Controllability and Observability 340
- 9.8 Controller Design with State Feedback 343

9.9 Observer Design 347

9.10 Summary 350

References 351

Problems 351

APPENDIX A. LAPLACE TRANSFORMATION

354

A.1 Definition of Laplace Transform 354

A.2 Laplace Transform of Elementary Functions 355

A.3 Some Theorems of Laplace Transformation 358

A.4 Inverse Laplace Transformation 361

References 363

APPENDIX B. MATRIX ALGEBRA

364

B.1 Definitions 364

B.2 Addition and Multiplication of Matrices 365

B.3 Matrix Inversion 367

B.4 Eigenvalues and Eigenvectors of a Matrix 369

References 370

APPENDIX C. ANSWERS TO SELECTED PROBLEMS

371

APPENDIX D. COMPUTER PROGRAMS

375

References 385
