

CONTENTS

Preface IX

Introduction 1

1 The Problem of Robust Control 6

- 1.1 The design problem 6
- 1.2 The design of feedback controllers for completely known plants 9
- 1.3 Model uncertainties 10
- 1.4 Feedback systems in presence of model uncertainties 12
- 1.5 Different properties describing a tolerance of model uncertainties 16
- 1.6 The main problems of robustness analysis and design 18

2 Fundamental Results from Feedback Theory 21

- 2.1 Models of control systems 21
- 2.2 Stability of feedback systems 27
- 2.3 Fundamental limitations of the closed-loop properties 30
- 2.4 LQ-regulation 34
- Bibliographical notes 35

3 Sensitivity of Feedback Systems 36

- 3.1 The principle of sensitivity analysis 36
- 3.2 Sensitivity of dynamical systems 38
- 3.3 Sensitivity analysis of feedback systems 41
- 3.4 Sensitivity design 44
- 3.5 Summary 48
- Bibliographical notes 49

4 A Survey of the Methods for Analysing and Designing Uncertain Feedback Systems 51

- 4.1 Classification according to the kind of robustness considered 51
- 4.2 Survey of the design methods 55

5	Models of Uncertain Systems	57
5.1	The methodology of modelling uncertain systems	57
5.2	Specimens of the original system	59
5.3	Systems with unknown-but-bounded uncertainties	60
	Bibliographical notes	76
6	Qualitative Robustness Analysis and Design	78
6.1	Stability margin	78
6.2	Stability degree	84
6.3	Robustness of two-time scale systems	85
6.4	High-gain feedback	90
6.5	Algebraic aspects of robustness	96
	Summary	99
	Bibliographical notes	99
7	Simultaneous Stabilisation and Pole Assignment	102
7.1	Simultaneous stabilisability	102
7.2	Simultaneous pole region assignment	107
	Bibliographical notes	112
8	Quantitative Robustness of Systems with Bounded Uncertainties	113
8.1	The quantitative feedback design	113
8.2	Description of the closed-loop original system	122
8.3	Frequency domain stability criteria	128
8.4	Time domain criteria for I/O-stability	142
8.5	Analysis of the I/O-performance	146
8.6	Design of robust multivariable controllers in presence of bounded uncertainties	152
8.7	Robustness analysis using state-space models	154
	Bibliographical notes	159
9	Controller Design by Means of Approximate Models	162
9.1	The design of a Smith predictor controller	162
9.2	Limiting the controller action to low-uncertainty frequencies	164
	Bibliographical notes	168
10	Robust Multivariable PI-Controllers	169
10.1	Existence of robust multivariable PI-controllers	170
10.2	Robustness of PI-controlled systems	176
10.3	Tuning of multivariable PI-controllers	184
	Bibliographical notes	195
11	Robust Decentralised Control	196
11.1	Robustness issues of decentralised control	196
11.2	Existence of robust decentralised PI-controllers	197

11.3 Design of robust decentralised controllers	202
Bibliographical notes	211

12 Trends in Robust Feedback Control	212
--------------------------------------	-----

Appendices	215
------------	-----

Appendix 1 Nonnegative and M -matrices	215
Appendix 2 Singular value decomposition	217
Appendix 3 The Nichols chart	219
