

Contents

<i>Preface</i>	<i>vii</i>
<i>Acknowledgements</i>	<i>xii</i>
1 Introduction	1
1.1 Systems and Control Engineering	1
1.1.1 An Automobile	2
1.1.2 A Physiological System	4
1.1.3 Defence Systems	5
1.1.4 A Typical Organization	6
1.1.5 Cell Cycle	7
1.1.6 Heads Up!	7
1.2 The Control Problem	9
1.3 Mathematical Modelling	10
1.4 Classification of Systems	16
1.5 Brief History of Control Systems	18
1.5.1 Early Control Up to 1900	18
1.5.2 The Pre-Classical Period: 1900 – 1935	18
1.5.3 The Classical Period: 1935 – 1955	19
1.5.4 The Modern Control Period: Post 1955	20
1.6 The Perspective of this Book	21
2 System and Signal Analysis	25
2.1 Introduction	25
2.1.1 Elementary Signals	26
2.2 Systems and Properties	32
2.2.1 The Convolution	38
2.2.2 The Concept of State	43
2.3 Models of Systems	46
2.4 Performance Analysis of Systems	51
2.4.1 First Order Systems	56
2.4.2 Second Order Systems	57
2.4.3 Higher Order Systems	64
2.4.4 A Performance Analysis Example	65

xiv Control Engineering

2.4.5	Stability Analysis of Systems	67
2.4.6	Bounded Input & Bounded Output [BIBO]	67
2.5	Discrete-Time Systems	76
2.5.1	Elementary Signals	79
2.5.2	Discrete-Time Systems	82
2.5.3	General Forms of Difference Equations	85
2.5.4	The Z - transform	86
2.5.5	Performance Analysis of Discrete-Time Systems	91
2.5.6	Stability Analysis of Discrete-Time Systems	91
2.6	Analysis of Signals	96
2.6.1	Fourier Analysis	100
2.6.2	Discrete-Time Signal Analysis	118
2.7	Summary	135
3	Feedback and the Design Process	139
3.1	Feedback	139
3.1.1	History of Negative feedback	147
3.2	Asymptotic Tracking	149
3.3	Design Specifications	154
3.3.1	Time-domain Specifications	155
3.3.2	Frequency-domain Specs	156
3.4	The Design Process	158
3.5	Control System Design	159
3.5.1	Summary of Control System Design	160
3.5.2	Scaling	161
4	Design in Time-domain	167
4.1	The Root Locus	167
4.1.1	Sensitivity of the Loci	179
4.1.2	The Stability Margin	180
4.2	The Design Perspective	182
4.2.1	Magnitude Compensation	183
4.2.2	Angle Compensation	185
4.3	Validity of Design	191
5	Design in Frequency Domain	199
5.1	The Frequency Response	200
5.1.1	The Polar Plots	200
5.1.2	The Semi-logarithmic Plots	210

5.1.3 Construction of Bode Plots	213
5.1.4 The Gain and Phase Margins	225
5.2 The Design Perspective	227
5.3 The Lead-Lag Compensator	235
5.4 PID Controllers	243
6 Practical Issues in SISO Systems	245
6.1 Achievable Performance	245
6.2 Constraints on S and T	248
6.2.1 Low Frequencies	253
6.2.2 High Frequencies	253
6.3 Requirements Imposed by d and r	258
6.4 Limitations Imposed by Input Constraints	259
6.5 Limitations Imposed by Uncertainty	261
6.6 Summary of Achievable Performance Analysis	262
6.7 Case Study	264
7 System Models in State Space	267
7.1 Two Examples	268
7.2 Building Blocks	273
7.3 Canonical Models of SISO Systems	277
7.3.1 First Canonical Form	277
7.3.2 Second Canonical Form	280
7.3.3 Third Canonical Form	281
7.3.4 Fourth Canonical Form	282
7.4 Solution of the State Equation	287
7.4.1 Similarity Transformations	290
7.4.2 Properties of e^{At}	293
7.5 Special Cases	294
7.6 MIMO Systems	300
7.7 Discrete-Time Systems	303
7.7.1 What is e^{At} ?	306
8 Numerical Computations in State-Space	311
8.1 Linear Algebra	311
8.1.1 The Axioms of a Vector Space	312
8.1.2 Span and Basis	315
8.1.3 Change of Basis	325
8.1.4 Linear Transformations	329

xvi Control Engineering

8.1.5 Eigenvalues and Eigenvectors	335
8.1.6 Orthonormal Bases	344
8.1.7 Gram - Schmidt Orthonormalization	351
8.2 Computing the Matrix Exponential	358
8.2.1 A Naive Method	359
8.2.2 Using Cayley-Hamilton Theorem	361
8.2.3 Faddeeva - Leverrier Algorithm	367
8.3 Concluding Comments	369

9 Stability 371

9.1 Introduction	371
9.2 Lyapunov's Criterion	380
9.2.1 Discrete-Time Systems	392
9.3 Numerical Solution of the Lyapunov Equation	394
9.3.1 The Kronecker Product Algorithm	395
9.3.2 The Bartels-Stewart Algorithm	396

10 Controllability and Observability 401

10.1 Introduction	401
10.2 Controllability	402
10.2.1 State Feedback Control in General	415
10.3 Output Feedback	424
10.4 Observability	427
10.4.1 Observers	429
10.4.2 Reduced Order Observers	434
10.5 The Grammians and the Lyapunov Equation	436
10.6 Discrete-Time Systems	438
10.7 Physical Aspects of Control Design	442
10.8 Computational Issues	443
10.9 Computational Complexity	445

Epilogue 451

Appendices

A Table of Transforms	453
B Block Diagram Algebra	455
C Proof of Routh - Hurwitz Criterion	459
D An Overview of Control System Design	463
