PREFACE xv

1 BASIC CONTROL SYSTEM CONCEPTS 1

- 1-1 Introduction 1
- 1-2 Simple Systems and the Time Constant 2
- 1-3 Simple Closed Loop System 6
- 1-4 The Transfer Function 8
- Glossary 11
- Problems 12

2 AMPLIFIERS WITH FEEDBACK 15

- 2-1 Introduction 15
- 2-2 Positive Feedback and Instability 23

2-3	Phase Shift as a Function of Time Delay	25
	Glossary	26
	Problems	27

3 GRAPHICAL SOLUTION OF NETWORK RESPONSE 31

3-1	Introduction	31
3-2	The Decibel	32
3-3	The Time Constant and the Corner Frequency	33
3-4	The Octave and the Decade	36
3-5	The Universal Plot of a Single Lag Network	38
	3-5-1 Normalizing	40
3-6	Solutions of Networks in Series	43
	3-6-1 The Bode plot	43
	3-6-2 The amplifier	44
	3-6-3 Gain crossover frequency	47
	Glossary	49
	Problems	50

4 THE S OPERATOR AND THE LAPLACE TRANSFORM 53

4-1	Introduction	53
4-2	Basic Types of Networks	54
	4-2-1 The lag network	54
	4-2-2 The lead network	54
	4-2-3 Miscellaneous networks	56

4-3	The s Operator	58
4-4	Network Solutions Using the s Operator	59
4-5	The Laplace Transforms	62
4-5-1	<i>Theory of Laplace transforms</i>	63
4-6	Use of the s Operator and the Laplace Transforms	66
4-7	The Series <i>LCR</i> Circuit	70
	Glossary	72
	Problems	73

5 SOLUTION OF COMPLEX TRANSFER FUNCTIONS 77

5-1	Introduction	77
5-2	Solution of Second Order Equations in Terms of s	78
5-3	The Lead Network	80
5-4	Special Transfer Functions	84
	Glossary	91
	Problems	91

6 CONTROL SYSTEM COMPONENTS 95

6-1	Introduction	95
6-2	Position Potentiometer	97
6-3	The Position Transformer (Synchro)	99
6-3-1	<i>The linear synchro</i>	101
6-3-2	<i>The rotary encoder</i>	101
6-4	Modulator/Demodulator	101

6-5	Control System Drive Motors	104
6-5-1	<i>Servo motor (angular displacement type)</i>	104
6-5-2	<i>The servo control valve (linear displacement type)</i>	105
6-6	The Transfer Function of a Rotating Type Servo Control Motor	107
6-7	Transfer Functions for Control System Components	110
6-8	The Flow Diagram of a Simple Control System	112
6-9	Phase Compensation	113
6-10	The Rate Generator	114
	Glossary	116
	Problems	117

7 OPEN LOOP SYSTEM ANALYSIS 121

7-1	Introduction	121
7-2	Position Control System Transfer Function	123
7-2-1	<i>Bode plot analysis</i>	124
7-3	Gain Effects on System Performance	130
7-3-1	<i>Dead space</i>	130
7-3-2	<i>Effect of low system gain</i>	132
7-4	Effect of a Lead Network on the Phase Margin	133
7-5	Effect of Rate Feedback on the Phase Margin	135
7-6	Velocity Lag Error	136
	Glossary	137
	Problems	138

8 CLOSED LOOP SYSTEM ANALYSIS 141

8-1	Introduction	141
8-2	The Closed Loop Position Control System	142
8-2-1	<i>Adding a gear train</i>	143
8-3	Steady State Analysis	144
8-4	Effect of Gain on Closed Loop Response	147
8-4-1	<i>Peak response M_p at ω_p</i>	147
8-5	The Damping Factor	149
8-5-1	<i>Natural resonance ω_n</i>	150
8-5-2	<i>Determining the peak frequency response ω_p</i>	151
8-5-3	<i>Determining the bandwidth ω_B of a closed loop system</i>	155
	Glossary	159
	Problems	160

9 GRAPHICAL SOLUTION OF CLOSED LOOP SYSTEMS 163

9-1	Introduction	163
9-2	The Nichols Chart	164
9-3	Procedure for Using the Nichols Chart	164
9-4	Interpreting the Nichols Chart	169
9-4-1	<i>Determining K_0 from the Nichols chart</i>	171
9-4-2	<i>Determining ω_p, M_p, ω_B</i>	174
	Glossary	177
	Problems	177

APPENDIX A	The Motor Transfer Function in Terms of Moment of Inertia and Viscous Damping	219
APPENDIX B	Rate Feedback	223
APPENDIX C	The Lead Network	229
APPENDIX D	Phase Margin	233
APPENDIX E	A Speed Control System	237
APPENDIX F	The Laplace Transformations	241
INDEX		245
