

Contents — *Principles of Radio Electronics* (A. M. Kugushev)

- 1. Mathematical and Physical Foundations**
 - Mathematical methods
 - Electromagnetic fields
 - Maxwell's equations
 - Electromagnetic waves
- 2. Electrodynamics of Media**
 - Wave propagation
 - Wave–matter interaction
 - Dielectric, magnetic, and plasma media
- 3. Linear Electromagnetic Processes**
 - Linear circuit theory
 - Resonance phenomena
 - Guided-wave propagation
 - Transmission lines
- 4. Nonlinear Processes**
 - Nonlinear active media
 - Frequency mixing
 - Frequency conversion
 - Self-sustained oscillations
- 5. Amplification and Generation**
 - RF and microwave amplifiers
 - Electronic oscillators
 - Oscillator stability
- 6. Microwave Electronics**
 - Waveguides
 - Resonant cavities
 - Beam–wave interaction
- 7. Quantum Electronics**
 - MASER and LASER principles
 - Paramagnetic amplifiers
 - Optical and microwave generation
- 8. Radio Wave Propagation**
 - Antennas
 - Reflection and diffraction
 - Radio transmission systems
- 9. Applications of Radio Electronics**
 - Telecommunications
 - Radar systems
 - Microwave technologies
