

contents

1. Advanced Architectures for Video-Based Surveillance Systems
2. Distributed and Networked Surveillance Platforms
3. Real-Time Video Processing Frameworks
4. Intelligent Monitoring System Design

Part II: Motion Detection and Tracking

5. Motion Detection Techniques in Dynamic Environments
6. Object Segmentation and Feature Extraction
7. Multi-Object Tracking Methods
8. Robust Tracking under Occlusions and Scene Changes

Part III: Scene Analysis and Event Recognition

9. Scene Understanding and Interpretation
10. Human Activity Recognition
11. Behavior Analysis in Surveillance Applications
12. Automatic Event Detection and Alarm Generation

Part IV: Sensor Fusion and Multi-Camera Systems

13. Multi-Sensor Data Fusion Techniques
14. Cooperative Multi-Camera Surveillance
15. Camera Calibration and 3D Scene Reconstruction
16. Distributed Information Processing

Part V: Applications and Future Developments

17. Surveillance in Transportation Systems
18. Security and Public Safety Applications
19. Emerging Trends in Intelligent Video Surveillance
