

Table of Contents

1. Introduction

- **1.1 Why Is Engineering Different?**
- **1.2 Thinking Big and Small**
- **1.3 Crude and Refined Calculations**
- **1.4 The Engine and the Atmosphere – A Broad Outline**
 - 1.4.1 The Engine
 - 1.4.2 The Atmosphere
 - 1.4.3 The Engine and the Atmosphere – An Engineering System
 - 1.4.4 Summary
- **1.5 Outline of the Book**
- **1.6 Problems**

2. Thermodynamics

- **2.1 What Is the Most Efficient Engine?**
- **2.2 Thermodynamic Systems, Thermal Equilibrium, and Temperature**
- **2.3 Engineering Cycles and Heat Engines**
- **2.4 Energy, Work, and Heat: The First Law of Thermodynamics**
- **2.5 Summary of the First Law**
- **2.6 Alternative Forms of the First Law**
- **2.7 Application of the First Law to a Piston Engine**
- **2.8 Reversibility**
- **2.9 The Carnot Cycle**
- **2.10 A Comparison between a Real Cycle and the Idealized Carnot Cycle**
- **2.11 The Second Law of Thermodynamics**
- **2.12 Summary and Discussion**
- **Problems**

3. Fluid Dynamics

- **3.1 Smooth Streams, Transition, and Turbulence**
- **3.2 Why Is It So?**
- **3.3 Why We Need Pumps: Friction and Stresses in Fluids**
 - Laminar Flow
 - Turbulent Flows
 - The Calculation of Pressure Drop in a Pipe
- **3.4 The Bernoulli Equation**
- **3.5 Some Applications of the Bernoulli Equation**
- **3.6 A Further Look at the First Law of Thermodynamics: Open Systems**
- **3.7 Gas Turbines and Jet Engines**
- **3.8 The Fluid Mechanics of the Internal Combustion Engine**
- **3.9 The Use of Computers in Studying the Fluid Dynamics of Engines**
- **3.10 Summary and Discussion**

- **Problems**

4. Heat Transfer

- **4.1 Conduction**
- **4.2 Convection**
- **4.3 Radiation**
- **4.4 Radiation in a Vacuum**
- **4.5 Radiation through Gases**
- **4.6 Summary**
- **Problems**

5. The Atmosphere

- **5.1 Overall Characteristics**
- **5.2 The Energy and Power of Its Motion**
- **5.3 The Role of Water**
- **5.4 Scales of Motion**
- **5.5 Its Variation with Height**
- **5.6 The Greenhouse Effect**
- **5.7 The Atmospheric Boundary Layer**
 - Temperature Profiles in the ABL
 - The Richardson Number
- **5.8 Discussion**
- **Problems**

6. Energy Sources

- **6.1 The Energy in Chemical Bonds: Hydrocarbon and Hydrogen Fuels**
- **6.2 The Energy in Atomic Bonds: Nuclear Energy**
- **6.3 Renewable Energy**
- **6.4 An Example of a Renewable Energy Source: The Windmill**
- **6.5 The Availability of Wind, Sun, and Water**
- **6.6 Are Our Energy Sources Finite?**
- **6.7 Summary**
- **Problems**

7. The Engine, the Atmosphere, and the Engineer

- **7.1 Review**
- **7.2 Local and Global Issues: Small and Large Numbers Revisited**
- **7.3 The Difficulty of Making Predictions**
- **7.4 A Crude Estimate of Future Energy Consumption**
- **7.5 The Engineer's Dilemma**
- **7.6 The Challenge**

Appendix

- **The Equations of Fluid Motion**

References

- **General References**
- **Specialized Sources**

Additional Sections

- **Answers to Problems**
- **Index**
