# Contents

## 1. Semiconductor Materials

- Crystal structure
- Atomic bonding
- Energy bands
- Conductors, semiconductors, and insulators
- Intrinsic and extrinsic semiconductors

## 2. Semiconductor Physics

- Electrons and holes
- Carrier concentrations
- Fermi level
- Carrier transport
- Drift and diffusion currents
- Conductivity and mobility

## 3. Excess Carriers in Semiconductors

- Carrier generation and recombination
- Minority carriers
- Diffusion processes
- Carrier lifetime
- Continuity equation

## 4. The PN Junction

- Formation of the depletion region
- Built-in potential
- Forward and reverse bias
- Current-voltage characteristics
- Junction capacitance

## 5. Junction Devices

- Rectifier diodes
- Zener diodes
- Photodiodes
- Solar cells
- Light-emitting diodes (LEDs)

## 6. Bipolar Junction Transistors (BJTs)

- NPN and PNP structures
- Transistor action
- Current gain
- Operating modes
- Large-signal and small-signal models

## 7. Metal–Oxide–Semiconductor (MOS) Structure

- MOS capacitor
- Surface charge
- Accumulation, depletion, and inversion
- Threshold voltage

## 8. MOS Field-Effect Transistors (MOSFETs)

- Device structure
- Channel formation
- Linear and saturation regions
- Current-voltage relationships
- Device scaling

## 9. CMOS Technology

- CMOS inverter
- Digital switching
- Power dissipation
- Integrated circuits
- VLSI concepts

## 10. Optoelectronic Devices

- Optical absorption
- Photodetectors
- LEDs
- Semiconductor lasers

## 11. Power and Microwave Devices

- Power diodes
- Power MOSFETs
- IGBTs
- High-frequency devices

## 12. Advanced Semiconductor Devices

- Heterojunction devices
- HEMTs
- Quantum devices
- Nanotechnology applications
