

Table of Contents

1. Introduction to Non-Linear Dynamical Systems

- Fundamentals of nonlinear control
- Modeling and simulation of dynamical systems
- Principles of intelligent control

2. Fuzzy Logic

- Fuzzy set theory
- Fuzzy reasoning and inference systems
- Type-2 fuzzy logic
- Fuzzy modeling

3. Neural Networks for Control

- Multilayer neural networks
- Backpropagation algorithm
- Adaptive neuro-fuzzy inference systems (ANFIS)
- Neural network-based adaptive control

4. Genetic Algorithms and Simulated Annealing

- Fundamentals of genetic algorithms
- Simulated annealing techniques
- Optimization of nonlinear systems

5. Dynamical Systems Theory

- Fundamentals of dynamical systems
- Chaos theory
- Chaos control

6. Hybrid Intelligent Systems for Time-Series Prediction

- Time-series forecasting
- Fractal dimension
- Fuzzy classification
- Neuro-fuzzy prediction methods

7. Modeling Complex Dynamical Systems Using Fuzzy Inference

- Differential equation modeling
- Robotic system modeling
- Modeling of aerospace dynamical systems

8. Fuzzy Chaos Theory

- Identification of dynamical behavior
- Simulation of nonlinear systems
- Parameter optimization using genetic algorithms

9. Intelligent Control of Robotic Systems

- Mathematical modeling of robots
- Model-based adaptive control
- Simulation and robotic control

10. Control of Biochemical Reactors

- Fuzzy modeling
- Neural network-based control
- Adaptive control of nonlinear processes

11. Control of Aerospace Dynamical Systems

- Fuzzy modeling of aerospace systems
- Neural networks for control
- Adaptive aircraft control

12. Control of Electrochemical Processes

- Fuzzy logic control
- Neuro-fuzzy methods
- Hybrid neuro-fuzzy and genetic approaches

13. Control of International Trade Dynamics

- Mathematical modeling
- Fuzzy model selection
- Model-based adaptive control
