

Contents

1. Introduction to Process Control

- Industrial process control systems
- Control terminology and concepts
- Open-loop and closed-loop control
- Process variables and measurements
- Control system objectives

2. Basic Measurement Principles

- Standards and calibration
- Accuracy, precision, and sensitivity
- Measurement errors
- Signal conditioning
- Data acquisition systems

3. Pressure Measurement

- Pressure sensing principles
- Manometers and Bourdon tubes
- Strain-gauge pressure sensors
- Differential pressure transmitters
- Pressure calibration methods

4. Temperature Measurement

- Temperature scales and standards
- Thermocouples
- Resistance temperature detectors (RTDs)
- Thermistors
- Infrared and radiation pyrometers

5. Flow Measurement

- Flow measurement fundamentals
- Differential pressure flowmeters
- Turbine and magnetic flowmeters
- Ultrasonic flow measurement
- Mass flow measurement techniques

6. Level Measurement

- Direct and indirect level measurement
- Float and displacer methods
- Capacitive and ultrasonic sensors
- Radar level measurement
- Industrial tank monitoring

7. Analytical Measurement

- pH measurement
- Conductivity sensors
- Gas analyzers
- Humidity measurement
- Chemical process analysis

8. Final Control Elements

- Control valves and actuators
- Pneumatic actuators
- Electric and hydraulic actuators
- Valve characteristics
- Valve sizing and selection

9. Process Dynamics

- Dynamic response of processes
- First-order and second-order systems
- Dead time effects
- Process modeling
- Transfer functions

10. Feedback Control Systems

- Feedback control principles
- PID controllers
- Controller tuning methods
- Stability analysis
- Cascade and ratio control

11. Digital and Computer-Based Control

- Digital controllers
- Programmable logic controllers (PLCs)
- Distributed control systems (DCS)
- Supervisory control and data acquisition (SCADA)
- Industrial communication networks

12. Industrial Instrumentation Systems

- Instrumentation standards
- Signal transmission methods
- Smart instruments
- Industrial safety systems
- Maintenance and troubleshooting

13. Control System Applications

- Chemical process industries
- Power generation systems
- Manufacturing automation
- Water treatment processes
- Oil and gas applications

14. Advanced Process Control

- Adaptive control
- Model predictive control
- Intelligent control systems
- Fuzzy logic applications
- Future trends in automation
