<i>Contributors</i>	ix
<i>Preface</i>	xi
1 Convolution and Related Concepts	1
<i>Peter A. Jansson</i>	
I. Introduction	3
II. Definition of Convolution	5
III. Properties	8
IV. Fourier Transforms	12
V. The Problem of Deconvolution	32
References	39
2 Distortion of Optical Spectra	42
<i>Peter A. Jansson</i>	
I. Inherent Line Breadth	45
II. Contribution of Dispersive Spectrometer	52
III. Resolution Criteria	71
References	74
3 Traditional Linear Deconvolution Methods	76
<i>Peter A. Jansson</i>	
I. Direct Approach	78
II. Van Cittert's Method	81
III. Matrix Inversion	82

iv Contents

IV.	Inverse Filters	92
V.	Other Linear Methods	101
VI.	Overview of Linear Methods	102
	References	104

4 Modern Constrained Nonlinear Methods 107

Peter A. Jansson

I.	Introduction	111
II.	The Meaning of Constraints	112
III.	The Promise of Analytic Continuation	113
IV.	Ratio Methods	114
V.	Schell's Method	117
VI.	Jansson's Method	119
VII.	Biraud's Method	134
VIII.	Frieden's Method of Maximum Likelihood	137
IX.	Alternating Projection Methods	145
X.	Howard's Methods	151
XI.	Monte Carlo Methods	153
XII.	Neural Networks	157
XIII.	Other Methods	167
XIV.	Reviews and Reference Works	169
XV.	Concluding Remarks	170
	References	172

5 Convergence of Relaxation Algorithms 182

Paul Benjamin Crilly

I.	Introduction	183
II.	Error Analysis	184
III.	Mathematics of Convergence	185
IV.	Experimental Testing	193
V.	Conclusion	198
	References	198

6 Instrumental Considerations 200

William E. Blass and George W. Halsey

I.	Introduction	203
II.	Resolution-Acquisition-Time Trade-Offs	203

III.	Acquiring the Data: Dispersive Spectrophotometers	204
IV.	Details of Spectroscopic Experiments	221
V.	Preparing to Deconvolve a Data Set	228
VI.	Deconvolving the Data: Constrained Deconvolution	231
	References	234
7	Deconvolution Examples	236
	<i>Paul Benjamin Crilly, William E. Blass, and George W. Halsey</i>	
I.	Introduction	237
II.	Examining the Deconvolution Process	238
III.	Simulations	239
IV.	Deconvolution Examples	246
	References	263
8	Application to Electron Spectroscopy for Chemical Analysis	264
	<i>Robert D. Davies and Peter A. Jansson</i>	
I.	Introduction	265
II.	Distortions Present in ESCA Spectra	267
III.	Correction of Distortions	271
IV.	Applications	275
V.	Concluding Remarks	281
	References	282
9	Deconvolution in Optical Microscopy	284
	<i>Jason R. Swedlow, John W. Sedat, and David A. Agard</i>	
I.	Introduction	286
II.	Image Blurring in Optical Microscopy	287
III.	Data for Image Deconvolution	292
IV.	Constrained, Iterative Deconvolution of Microscopic Images	294
V.	Other Methods	301
VI.	Uses of Constrained, Iterative Deconvolution in Cell Biology	303
VII.	Future Directions	305
VIII.	Conclusions	307
	References	307

10	Deconvolution of Hubble Space Telescope Images and Spectra	310
	<i>Robert J. Hanisch, Richard L. White, and Ronald L. Gilliland</i>	
I.	Introduction	312
II.	Hubble Space Telescope Data	314
III.	The Hubble Space Telescope Point-Spread Function	316
IV.	The Richardson-Lucy Algorithm and Adaptations	318
V.	Phase Retrieval and Blind Deconvolution	337
VI.	Spectral Deconvolution	343
VII.	Other Algorithms	348
VIII.	Image Restoration and Photometry	351
IX.	Post-Servicing Mission Performance	352
X.	Summary and Conclusions	354
	References	356
11	Maximum Probable Estimates of Spectra	361
	<i>B. Roy Frieden</i>	
I.	Introduction	363
II.	Orientation	364
III.	Physical Model for the Object	366
IV.	Most Probable Object: Definition	370
V.	Most Probable Object in the Presence of Data	372
VI.	Object-Class Law	373
VII.	Case of a "White" Object; Maximum Entropy	374
VIII.	Scenarios for Knowing $p(q_1, \dots, q_M)$	375
IX.	Estimators	382
X.	How to Handle Noise	387
XI.	Test Cases	388
XII.	Conclusion	396
	References	396
12	Fourier Spectrum Continuation	397
	<i>Samuel J. Howard</i>	
I.	Introduction	398
II.	Advantages of Fourier Analysis	400
III.	Restoration and Enhancement of Experimental Data	401
IV.	Discrete Fourier Transform and Discrete Function Continuation	408
V.	Constraint of Finite Extent	416
VI.	Concluding Remarks	424
	References	426

13	Minimum-Negativity-Constrained Fourier Spectrum Continuation	427
	<i>Samuel J. Howard</i>	
I.	Theory	428
II.	Application	433
III.	Concluding Remarks	467
	Appendix A	468
	Appendix B	469
	References	474
 14	 Alternating Projections onto Convex Sets	 476
	<i>Robert J. Marks II</i>	
I.	Introduction	478
II.	Geometrical POCS	478
III.	Convex Sets of Signals	484
IV.	Examples	490
V.	Notes	497
VI.	Conclusions	498
	References	499
