

Contents

Chapter 1. Special Problems in the Bending of Beams

- Beams on Elastic Foundations
- Beams with Combined Axial and Lateral Loads
- Continuous and Curved Beam Problems
- Deflection Methods
- Energy Methods in Beam Analysis

Chapter 2. Curved Bars

- Theory of Curved Bars
- Stress Distribution in Curved Members
- Deflection of Curved Bars
- Rings, Hooks, and Chain Links
- Curved Tubes and Frames

Chapter 3. Thin Plates and Shells

- Bending of Rectangular Plates
- Circular Plates
- Plates with Openings
- Thermal Stresses in Plates
- Cylindrical and Curved Shells

Chapter 4. Buckling of Bars, Plates, and Shells

- Elastic Stability
- Buckling of Columns
- Lateral Buckling of Beams
- Buckling of Plates
- Stability of Thin Shells

Chapter 5. Axisymmetric Deformations

- Thick-Walled Cylinders
- Rotating Disks
- Shrink Fits

- Pressure Vessels
- Thermal Stresses in Cylinders

Chapter 6. Torsion

- Torsion of Noncircular Sections
- Thin-Walled Members
- Torsion of Closed Sections
- Warping Effects
- Torsional Rigidity

Chapter 7. Stress Concentration

- Stress Around Holes
- Notches and Grooves
- Contact Stresses
- Stress Distribution Near Discontinuities
- Design Against Failure

Chapter 8. Deformation Beyond the Elastic Limit

- Plastic Deformation
- Yield Criteria
- Plastic Bending
- Residual Stresses
- Inelastic Behavior of Materials

Chapter 9. Mechanical Properties of Materials

- Tensile and Compression Tests
- Fatigue
- Creep
- Impact Loading
- Fracture and Failure
- Material Strength Characteristics

Appendix

- Tables
- Engineering Constants

- Mathematical Formulas

Index
