

Content

1. Electric Motors – The Basics

- Introduction
- Producing Rotation
- Magnetic Circuits
- Torque Production
- Energy Conversion
- Equivalent Circuit
- General Properties of Electric Motors

2. Introduction to Power Electronic Converters for Motor Drives

- DC Voltage Control
- Controlled Rectifiers
- Inverters
- AC–AC Converters
- Power Semiconductor Devices
- Converter Waveforms and Cooling

3. Conventional DC Motors

- Torque Production
- Back EMF
- Steady-State Characteristics
- Starting and Transient Behaviour
- Regenerative Braking
- Shunt and Series Motors

4. DC Motor Drives

- Thyristor Drives
- Chopper Drives
- Closed-Loop Speed Control
- Four-Quadrant Operation

5. Induction Motors: Rotating Field, Slip and Torque

- Rotating Magnetic Field
- Slip
- Torque Production
- Equivalent Circuit
- Starting Characteristics

6. Operating Characteristics of Induction Motors

- Torque–Speed Characteristics
- Efficiency
- Power Factor
- Starting Methods
- Speed Control

7. Inverter-Fed Induction Motor Drives

- Variable Frequency Drives (VFD)
- PWM Inverters
- Constant V/f Control
- Vector Control

- Dynamic Performance
- 8. Stepping Motor Systems**
 - Construction
 - Operating Principles
 - Drive Circuits
 - Position and Speed Control
 - Applications
- 9. Synchronous, Switched Reluctance and Brushless DC Drives**
 - Synchronous Motors
 - Permanent Magnet Motors
 - Brushless DC Motors (BLDC)
 - Switched Reluctance Motors (SRM)
 - Control Strategies
- 10. Motor/Drive Selection**
 - Selection Criteria
 - Matching Motors to Applications
 - Economic Considerations
 - Reliability and Efficiency
 - Typical Industrial Applications
