

# Table of Contents

## 1. **Mechanics**

- Mass, force, pressure and torque
- Work, energy and power
- Lifting machines
- Forces and their graphical representation

## 2. **Heat**

- Heat and temperature
- Temperature scales
- Specific heat
- Heat transfer
- Conduction, convection and radiation
- Thermal expansion

## 3. **Fundamental Principles of Electricity**

- Nature of electricity
- Atomic theory and electric current
- Electric circuits
- Conductors and insulators
- Effects of electric current
- Current, charge, electromotive force and potential difference
- Resistance and Ohm's law
- Series and parallel circuits
- Resistance of conductors
- Voltage drop in cables
- Effect of temperature on resistance

## 4. **Magnetic Fields and Materials**

- Permanent magnets and magnetic fields
- Magnetic flux
- Electromagnets
- Solenoids
- Magnetic circuits
- Magnetisation curves
- Iron losses
- Magnetic materials

## 5. **Magnetic Fields and Electric Currents**

- Force on a current-carrying conductor
- Induced electromotive force
- Electromagnetic induction
- Self-induction and mutual induction
- Lenz's law

## 6. **Power and Energy**

- Electrical power and energy
- Conversion of electrical energy into work
- Electric heating
- Electric water heating

- Air heating
- Control of heating equipment
- 7. **Primary Cells and Accumulators**
  - Storage of electrical energy
  - Primary cells
  - Secondary cells and accumulators
  - Internal resistance
  - Batteries
  - Capacity and efficiency
- 8. **Direct-Current Machines**
  - Principles of generators
  - Principles of motors
  - Construction of DC machines
  - DC generators
  - Types of generators
  - DC motors
  - Torque and back EMF
  - Speed control and reversal
  - Starting and protection
- 9. **Electric Fields and Capacitors**
  - Electric charges and fields
  - Capacitance
  - Dielectrics
  - Breakdown of dielectrics
  - Capacitors in series and parallel
  - Construction of capacitors
- 10. **Fundamental Principles of Alternating Current**
  - Nature of alternating current
  - Advantages of AC systems
  - Characteristics of alternating quantities
  - Sinusoidal waveforms
  - Phasors and phase difference
  - Resistive, inductive and capacitive circuits
  - Impedance
  - Single-phase and three-phase systems
