

Relevant Table of Contents – *Technology of Integrated Circuits* (Widmann, Dietrich)

1. Introduction

- History and development of integrated circuits
- Planar technology concept
- Semiconductor manufacturing overview

2. Fundamentals of Integrated Circuit Technology

- Silicon wafer technology
- Basic IC fabrication processes
- Process flow in microelectronics

3. Thin-Film Technology

- Silicon crystal growth and wafer preparation
- Thermal oxidation
- Epitaxy
- Chemical Vapor Deposition (CVD)
- Physical Vapor Deposition (PVD)
- Sputtering
- Polysilicon technology
- Silicon dioxide (SiO_2)
- Silicon nitride (Si_3N_4)
- Silicides
- Metallization materials

4. Lithography

- Photolithography principles
- Photoresists
- Mask alignment
- Resolution and pattern transfer
- Electron-beam lithography
- X-ray lithography
- Ion-beam lithography

5. Etching Technology

- Wet etching
- Dry etching
- Plasma etching
- Reactive Ion Etching (RIE)
- Chemical Mechanical Polishing (CMP)

6. Doping Technology

- Thermal diffusion
- Ion implantation
- Dopant profiles
- Annealing and activation
- Sheet resistance

7. Cleaning Technology and Contamination Control

- Wafer cleaning methods
- Particle contamination
- Cleanroom technology
- Process purity requirements

8. Process Integration

- MOS technology
- CMOS technology
- Bipolar technology
- BiCMOS technology
- Memory fabrication (SRAM, DRAM, EEPROM)
- Multilayer metallization
- Passivation techniques
- Complete CMOS process flow
