

# Table of Contents - Fundamentals of Chemical Technology

## 1. Introduction to Chemical Technology

1.1 The role of the chemical industry

1.2 Raw materials and industrial water

1.3 Types of chemical processes

1.4 Basic process classifications

## 2. General Laws of Chemical Technology

2.1 Mass conservation in processes

2.2 Energy conservation and thermodynamics

2.3 Reaction kinetics and mechanisms

2.4 Catalysis and catalytic processes

## 3. Chemical Reactors and Process Modeling

3.1 Reactor types: batch, continuous, plug-flow, stirred tank

3.2 Homogeneous and heterogeneous reactors

3.3 Reactor design principles

3.4 Modeling and simulation

## 4. Industrial Chemical Processes

4.1 Ammonia synthesis

4.2 Sulfuric and nitric acid production

4.3 Chlor-alkali processes

4.4 Electrochemical processes

4.5 Polymerization reactions

## 4.6 Metallurgical chemical processes

## 5. Energy and Environmental Efficiency

### 5.1 Heat integration and recovery

### 5.2 Energy-saving technologies

### 5.3 Waste minimization

### 5.4 Water and air pollution control

## 6. Case Studies and Applications

### 6.1 Process diagrams and flowsheets

### 6.2 Troubleshooting process units

### 6.3 Pilot plant design considerations

### 6.4 Industrial safety and regulations

## 7. Appendices

### 7.1 Units and conversion tables

### 7.2 Glossary of technical terms

### 7.3 Recommended references and bibliography
