

Contents

1. Introduction to Electronics

- Basic electrical concepts
- Voltage, current, and resistance
- Electrical safety
- Units and measurements

2. DC Circuit Fundamentals

- Ohm's Law
- Power and energy
- Series circuits
- Parallel circuits
- Series-parallel circuits
- Kirchhoff's Laws
- Network theorems (Thevenin and Norton)

3. Magnetism and Electromagnetism

- Magnetic fields
- Electromagnetic induction
- Transformers
- Applications of electromagnetism

4. Capacitors and Inductors

- Capacitor characteristics
- Inductor characteristics
- Energy storage
- Charging and discharging processes

5. AC Circuit Fundamentals

- Sinusoidal waveforms
- Frequency, period, and phase
- AC voltage and current
- RMS values

6. AC Circuit Analysis

- Reactance
- Impedance
- Phase relationships
- Power in AC circuits
- Power factor

7. RC, RL, and RLC Circuits

- Time constants
- Resonance
- Frequency response
- Filter circuits

8. Electronic Instruments and Measurements

- Multimeters
- Oscilloscopes
- Signal generators
- Measurement techniques

9. Semiconductor Devices

- Diodes
- Rectifiers
- Basic transistor concepts
- Electronic applications
