

Table of Contents

1. Generation of Electrical Energy

- Introduction to electrical energy generation
- Conventional and non-conventional energy sources
- Hydroelectric power plants
- Steam power plants
- Nuclear power plants
- Gas turbine power plants
- Solar energy
- Wind energy
- Tidal energy
- Geothermal energy
- Magneto-Hydro-Dynamic (MHD) generation
- Other renewable energy sources

2. Economics of Generation

- Load characteristics
- Load curves
- Load duration curves
- Load factor and demand factor
- Selection and scheduling of generating units
- Cost of electrical energy
- Fixed and operating costs
- Tariffs for electrical energy

3. Distribution of Electrical Energy

- Introduction to distribution systems
- Types of distribution systems
- DC and AC distribution
- Radial, ring-main and interconnected systems
- Voltage-drop calculations
- Selection and sizing of conductors
- Kelvin's law
- Distribution feeders and distributors
- Substations
- Substation earthing
- Distribution automation
- Reliability and quality of supply
- Energy audit

4. Electric Drives and Industrial Applications

- Introduction to electric drives
- Selection of electric motors
- Types of mechanical loads
- Steady-state characteristics
- Transient characteristics
- Motor rating and selection
- Load equalization

- Industrial applications of electric motors
- Speed control of DC motors
- Speed control of induction motors
- Electric braking
- 5. **Electric Heating and Welding**
 - Principles of electric heating
 - Resistance heating
 - Induction heating
 - Dielectric heating
 - Electric arc furnaces
 - Industrial electric furnaces
 - High-frequency heating
 - Principles of electric welding
 - Welding generators and transformers
 - Different welding processes
- 6. **Illumination Engineering**
 - Fundamentals of illumination
 - Photometric quantities
 - Laws of illumination
 - Sources of light and lamps
 - Luminous efficiency
 - Illumination calculations
 - Design of lighting installations
 - Residential lighting
 - Office and industrial lighting
 - Street lighting
 - Economic and aesthetic aspects of illumination
- 7. **Electric Traction**
 - Introduction to electric traction
 - Advantages of electric traction
 - Electric traction systems
 - Mechanics of train movement
 - Tractive effort
 - Characteristics of traction motors
 - Acceleration and running conditions
 - Control of traction motors
 - Electric and regenerative braking
 - Traction equipment
 - Modern trends in electric traction
- 8. **Electrolytic Processes**
 - Principles of electrolysis
 - Faraday's laws of electrolysis
 - Electrolytic efficiency
 - Electroplating
 - Electrodeposition
 - Extraction and refining of metals

- Industrial applications of electrochemical processes
