

Table of Contents

Part I: Fundamental Concepts

1. Some Basic Concepts — Mass, moles, chemical formulas
2. Atoms, Molecules, and Ions — Atomic theory, molecular and ionic compounds
3. Changes in Chemical Reactions — Stoichiometry, reaction yields
4. The Physical Behavior of Gases — Gas laws, kinetic molecular theory

Part II: Atomic Structure and Periodicity

5. The Structure of Atoms — Quantum theory, electron configuration
6. The Periodic Table — Periodic trends and properties
7. Chemical Bonding — Ionic and covalent bonds, Lewis structures
8. Molecular Geometry — VSEPR theory, hybridization

Part III: States of Matter

9. Liquids and Solids — Intermolecular forces, crystal structures
10. Solutions — Concentration units, colligative properties

Part IV: Equilibria and Reactions

11. Chemical Equilibrium — Equilibrium constants, Le Châtelier's principle
12. Acids and Bases — pH, strong and weak acids/bases
13. Ionic Equilibria — Buffers, solubility equilibria, complex ions
14. Chemical Thermodynamics — Enthalpy, entropy, Gibbs free energy
15. Electrochemistry — Galvanic cells, Nernst equation, electrolysis
16. Chemical Kinetics — Rate laws, reaction mechanisms, activation energy

Part V: Descriptive and Organic Chemistry

17. The Representative Elements — Main group elements and their compounds
18. Transition Elements — Coordination compounds, magnetic properties
19. Nuclear Chemistry — Radioactivity, nuclear reactions
20. Organic Chemistry — Functional groups, basic organic reactions

Appendices

- Constants and conversion factors
- Thermodynamic data tables
- Index

Note on PDF format

I cannot generate a PDF file directly. However, you can:

1. Copy the content into a word processor (Word, Google Docs)
2. Export as PDF via "File → Export → PDF"
3. Or use your browser's "Print → Save as PDF" function
