

table of contents

The Springer record lists **22 chapters**, covering the following major themes:

1. **Problem-oriented languages and DEPOT implementing system** — N. Joachim Lehmann
2. **Semantic attributes processing in the system DELTA** — Bernard Lorho
3. **Usability and portability of a compiler writing system** — Olivier Lecarme
4. **Semantic unification in a multi-language compiler** — Sergei Pokrovsky
5. **Procedure implementation in the multi-language translator** — V. K. Sabelfeld
6. **Program structure analysis in a global optimization** — V. N. Kasyanov and M. B. Trakhtenbrot
7. **Metalanguage for formal definition of semantics of programming languages** — I. V. Vel'bitskiy
8. **Some principles of compiler constructions** — A. L. Fuksman
9. **Almost top-down analysis for generalized LR(K) grammars** — Jaroslav Král
10. **An approach to the automation of constructing Multilanguage Translating Systems** — M. G. Gontsa
11. **Metaalgorithmic system of general application (MASON)** — V. L. Tëmov
12. **A simple translation automaton allowing the generation of optimized code** — P. Branquart et al.
13. **Some automatic transformations of CF-grammars** — Roland Strobel
14. **Several aspects of theory of parametric models of languages and parallel syntactic analysis** — G. E. Tseytlin and E. L. Yushchenko
15. **A sublanguage of ALGOL 68 and its implementation** — I. O. Kerner
16. **A programming system with automatic program synthesis** — E. H. Tyugu
17. **Experimental implementation of SETL** — D. Ya. Levin
18. **MIDL: A hybrid language of medium level** — E. Deak, M. Shimasaki and J. Schwartz
19. **The data structures representation in machine oriented higher level language** — B. G. Cheblakov
20. **On the macro extension of programming languages**
21. **Pragmatics in a compiler production system**
22. **CDL — A compiler implementation language.**
