

Contents

	Foreword	xv
	Preface	xvii
	Introduction	xix
1	Forms of Telecommunication	1
1.1	Telecommunications, Radio Communications, and Mobile Communications	1
1.1.1	Telecommunications	2
1.1.2	Radio Communications	2
1.1.3	Mobile Communications	5
1.2	Forms of Use of the Radio Spectrum	6
1.3	Sources and Receivers: Information-Traffic Patterns	9
1.4	The Information-Transport Chain	9
1.5	Summary	13
	Bibliography	14
2	The Development of Mobile Communications Systems	17
2.1	Early History of Radio Communications	17
2.2	Use by Public Services: Mobile Radio Systems	19
2.3	The Breakthrough: Mobile Telephony	20

2.3.1	Analog Mobile Telephony in the United States	21
2.3.2	Analog Mobile Telephony in Europe	28
2.3.3	Analog Mobile Telephony in the Far East	31
2.4	The Present Day: Mobile Communications Systems in the 1990s	32
2.4.1	Developments in the United States: PCS Networks	32
2.4.2	Developments in Europe: GSM and DCS-1800	37
2.4.3	Developments in the Far East	40
2.5	Third-Generation Mobile Networks: IMT-2000 and UMTS	41
2.6	Conclusion	45
	Bibliography	46
3	Policy and Regulations in the European Union	49
3.1	The Need for Regulation	49
3.2	International Regulatory Environment: ITU and WTO	51
3.2.1	International Telecommunication Union (ITU)	51
3.2.2	World Trade Organization (WTO)	55
3.3	European Policy and Regulations: Mobile Communications	56
3.3.1	Introduction	56
3.3.2	Background to EU's Involvement in Telecommunications	57
3.3.3	EU Competition Policy	58
3.3.4	The EU's Telecommunications Liberalization Policy	61
3.3.5	EU Harmonization Policy	64
3.4	Frequency Management	72
3.5	Institutional and Market Structure in EU Member States	74
3.5.1	Northern Europe	75
3.5.2	Western Europe	79
3.5.3	Southern Europe	87
3.6	Conclusion	90
	Bibliography	91

4	Structure of Radio Communications Systems	93
4.1	Components of a Radio Communications System	93
4.2	Characteristics of the Radio Channel	94
4.3	The Digital and Analog Debate	98
4.4	Network Configurations	99
4.4.1	One-Way Systems	99
4.4.2	Two-Way Systems	102
4.5	Cellular Systems	106
4.5.1	Location Management	109
4.5.2	Handover	110
4.5.3	Roaming	110
4.6	Network Architectures	111
4.7	Interconnection With Other Networks	114
4.8	Conclusion	118
	Bibliography	118
5	Techniques in Radio Communications	121
5.1	Technical Subsystems for Mobile Transceivers	122
5.1.1	Transducers	123
5.1.2	Domain Conversion	124
5.1.3	Speech Encoding	127
5.1.4	Channel Coding	129
5.1.5	Carrier-Wave Modulation	130
5.1.6	Multiple Access Mechanisms	136
5.1.7	Antenna and Antenna Multiplexing	139
5.2	Increasing the Capacity of Cellular Systems	140
5.3	Conclusion	142
	Bibliography	143
6	Cellular Telephony	145
6.1	First-Generation Analog Standards	145
6.1.1	NMT-450 and NMT-900	146
6.1.2	TACS and E-TACS	150
6.1.3	AMPS and N-AMPS	151
6.1.4	Other Analog Standards: NTT, C-450, Radiocom 2000, RTMS and MATS-E	153
6.1.5	Comparison of the Parameters of Analog Cellular Telephony Systems	156

6.2	Second-Generation Digital Standards	158
6.2.1	GSM	159
6.2.2	D-AMPS (IS-54, IS-136, D-AMPS-1900)	198
6.2.3	CDMA (IS-95)	201
6.2.4	PDC	206
6.2.5	Other Digital Standards	208
6.2.6	Comparing Parameters of Digital Cellular Telephony Systems	209
6.3	Global Market Shares of Cellular Telephony Systems	211
	Bibliography	212
7	Mobile Radio Networks	215
7.1	Public Access Mobile Radio (PAMR) versus Private Mobile Radio (PMR)	216
7.2	MPT-1327	217
7.3	TETRA	223
7.4	Tetrapol	232
7.5	Other Radio Communications Standards	234
7.6	Comparing the Parameters of Radiophone Standards	236
	Bibliography	236
8	Packet-Switched Mobile Data Communications	239
8.1	General Features and Areas of Application	240
8.2	MOBITEX	242
8.3	DataTAC	249
8.4	Datatrak	255
8.5	Other Standards for Packet-Switched Mobile Datacommunications	260
	Bibliography	262
9	Personal Satellite Communications	263
9.1	Geostationary Satellite Systems	263
9.1.1	INMARSAT A, B and M	265
9.1.2	INMARSAT-C	271
9.1.3	EUTELTRACS	274
9.2	Nongeostationary Satellite Systems	277
9.2.1	Nongeostationary Satellite Systems for Speech and Data	281

9.2.2	Nongeostationary Satellite Systems for Broadband Services	285
9.2.3	Nongeostationary Satellite Systems for <i>Low-Speed Data</i>	286
	Bibliography	288
10	Cordless Telephony	291
10.1	General Features and Areas of Application	293
10.2	CT-2	294
10.3	DECT	297
10.4	The Japanese PHS	304
10.5	PACS	307
10.6	Overview of Parameters of Standards for Wireless Telephony	308
	Bibliography	309
11	Paging	311
11.1	POCSAG	315
11.2	ERMES	321
11.2.1	Intermezzo: Two-Way Paging	328
11.2.2	FLEX, ReFLEX and InFLEXion	330
11.2.3	pACT	334
11.2.4	Other Paging Standards: APOC, Nexus, Data-LEO, Inmarsat-P, GSM <i>SMS-Only</i>	334
11.2.5	Comparison of Paging-System Parameters	335
	Bibliography	338
12	Other Related Standards	339
12.1	Telephony for Aviation: TFTS	339
12.2	Datacasting Networks	341
12.2.1	Datacasting Via FM Radio (RDS)	342
12.2.2	Datacasting Via Digital Radio (DAB)	344
12.2.3	Datacasting Via TV Channels	347
12.3	The GPS Navigation System	349
12.4	Satellite Communications for Fixed Connections: VSAT	351
12.5	Short-Distance Radiocommunications: DSRR	352
	Bibliography	354
