

Contents

1. **The Need for Maintenance Principles**
 - Complexity of modern electronic systems
 - Maintenance philosophy
 - Systematic troubleshooting approaches
2. **Reliability and Maintenance**
 - Reliability concepts
 - Failure rate analysis
 - MTBF (Mean Time Between Failures)
 - Preventive and corrective maintenance
3. **Maintenance Organization**
 - Maintenance management
 - Modular replacement techniques
 - Documentation systems
4. **Logical Fault Diagnosis**
 - Fault isolation methods
 - Step-by-step troubleshooting
 - Diagnostic reasoning
5. **The Half-Split Method**
 - Divide-and-conquer troubleshooting
 - Signal tracing techniques
 - Efficient fault localization
6. **Functional Block Diagrams**
 - System analysis
 - Functional relationships
 - Interpretation of electronic diagrams
7. **Fault-Finding Procedures**
 - Fault-finding guides
 - Decision trees
 - Standard diagnostic procedures
8. **Factors Affecting Reliability**
 - Temperature effects
 - Humidity and contamination
 - Mechanical vibration
 - Component aging
9. **Technical Documentation and Standards**
 - Electronic symbols
 - Circuit schematics
 - British Standards and SI units
10. **Training and Skills for Maintenance Personnel**
 - Analytical thinking
 - Technical competence

- Maintenance discipline

11. Industrial and Military Applications

- Communication systems
- Instrumentation systems
- Complex electronic equipment

12. Mathematical and Statistical Appendices

- Reliability mathematics
- Probability of failure
- Statistical maintenance methods
