

Table of Contents

Modern Power Station Practice, Volume 8 – Nuclear Power Generation

1. Nuclear Physics

- Structure of matter and atomic theory
- Atomic nuclei and isotopes
- Radioactivity
- Nuclear reactions
- Nuclear fission
- Neutron physics
- Nuclear energy and heat generation

2. Nuclear Power Reactors

- Requirements for nuclear reactors
- Principles of reactor operation
- Reactor fuel
- Moderators and coolants
- Control and regulation of reactors
- Types of nuclear reactors
- Magnox reactors
- Advanced Gas-cooled Reactors (AGR)
- Fast reactors
- Pressurized and other reactor concepts

3. British Nuclear Power Plant

- Nuclear power station design
- Site selection and station layout
- Reactor systems
- Fuel and fuel elements
- Reactor pressure vessels
- Cooling systems
- Steam generation and turbine systems
- Electrical systems and auxiliary equipment
- Materials used in nuclear power plants

4. Nuclear Power Station Operation

- Principles of nuclear station operation
- Reactor control and instrumentation
- Reactor commissioning
- Commissioning procedures and tests
- Power raising tests
- Operational control
- Nuclear fuel management
- Irradiated fuel handling
- Maintenance and inspection
- Operational procedures and emergency arrangements

5. Nuclear Techniques / Nuclear Safety

- Properties of reactor materials
- Radiation and radioactive contamination
- Health physics
- Radiation protection
- Shielding materials
- Nuclear safety
- Safety procedures and operating rules
- Radioactive waste and effluent disposal
- Nuclear legislation and regulations
- Recent developments in nuclear power
