

Table of Contents

- 1. Basic Circuit Elements**
 - Introduction
 - Circuit Elements
 - Network Classification
 - Linearity, Passivity, Lumped and Bilateral Networks
 - Time-Invariant and Time-Varying Systems
 - Reciprocity
 - Linear and Nonlinear Systems
 - Static and Dynamic Systems
 - Continuous-Time and Discrete-Time Systems
 - Deterministic and Stochastic Systems
 - Representation of Time Signals
 - Periodic Signals
 - Ideal and Perfect Transformers
 - Gyrator and Negative Converter
 - Independent and Dependent Sources
 - Source Transformation
 - Dot Convention for Coupled Circuits
- 2. Network Equations**
 - Kirchhoff's Laws
 - Star-Delta Transformation
 - Loop/Mesh Analysis
 - Nodal Analysis
 - Duality
 - Source Orientation
 - Supermesh and Supernode Concepts
- 3. Network Theorems**
 - Superposition Theorem
 - Reciprocity Theorem
 - Substitution Theorem
 - Thevenin's Theorem
 - Norton's Theorem
 - Millman's Theorem
 - Tellegen's Theorem
 - Maximum Power Transfer Theorem
 - Compensation Theorem
- 4. Graph Theory and Network Equations**
 - Graph Definitions
 - Incidence Matrix
 - Loop Matrix
 - Cut-Set and Cut-Set Matrix
 - Planar Graphs
 - Relations Between Network Matrices
 - Mesh, Node and Cut-Set Equations

- Networks with Mutual Inductance
- 5. **Differential Equations**
 - Homogeneous and Non-Homogeneous Linear Differential Equations
 - Initial Conditions in Circuits
 - First-Order Circuits
 - First-Order Circuits with DC Excitation
 - Second-Order Circuits
 - Transformer Analysis
- 6. **Fourier Series and Fourier Transforms**
 - Fourier Theorem
 - Even and Odd Functions
 - Half-Wave Symmetry
 - Exponential Fourier Series
 - RMS/Effective Value
 - Power
 - Fourier Transform
 - Properties of Fourier Transforms
 - Impulse Function and Impulse Train
 - Differentiation and Integration
 - Time and Frequency Scaling
 - Duality
 - Fourier Transform of a Sinusoid
 - Causal Functions
- 7. **Laplace Transform**
 - Properties of Laplace Transform
 - Transform of Typical Functions
 - Gate Function
 - Complex Frequency
 - Partial Fraction Expansion
 - Operational Representation of Circuit Elements
 - Initial and Final Value Theorems
 - Application to Electrical Networks
 - Convolution Integral
- 8. **Network Functions**
 - Driving-Point and Transfer Functions
 - Calculation of Network Functions
 - Two-Port Networks
 - z -, y -, h - and Transmission Parameters
 - Interconnection of Two-Port Networks
 - Cascade, Series and Parallel Connections
 - Two-Port Symmetry
 - Poles and Zeros of Network Functions
 - Physical Significance of Poles and Zeros
 - Response of Systems from Pole-Zero Locations
- 9. **Resonance**
 - Series Resonance

- Quality Factor Q
- Parallel Resonance
- Q of Parallel RLC Circuits
- Pole-Zero Configuration of RLC Circuits
- Multiple Resonance in High- Q Circuits

10. Passive Network Synthesis

- Positive Real Functions
- Properties of Positive Real Functions
- Basic Synthesis Procedures
- LC Immittance Functions
- Foster Forms
- Cauer Forms
- RC Impedance Functions
- RL Impedance and RC Admittance Functions

11. State Variable Analysis

- Concept of State
- State Variables
- State Equations
- State-Space Representation
- Solution of State Equations
- State Transition Matrix
- Stability
- Applications to Network Analysis

12. Attenuators and Classical Filters

- Attenuators
- Filter Fundamentals
- Constant- k Filters
- Low-Pass, High-Pass, Band-Pass and Band-Stop Filters
- m -Derived Filters
- Composite Filters

13. Modern Filter Theory and Active RC Filters

- Modern Filter Concepts
- Approximation Techniques
- Active Filters
- Active RC Filters
- Filter Realisation
- Frequency Response

14. Analogous Systems

- Electrical and Mechanical Analogies
- Force-Voltage Analogy
- Force-Current Analogy
- Applications of Analogous Systems

15. Frequency Response and Bode Plot

- Frequency Response
- Magnitude and Phase Characteristics
- Bode Plots

- Gain and Phase Margins
- Stability Considerations

16. z-Transforms

- Discrete-Time Signals and Sequences
- Unit Impulse and Exponential Sequences
- Sinusoidal Sequences
- z-Transform
- Inverse z-Transform
- Partial Fraction Expansion
- Long-Division Method
- Difference Equations
- Discrete-Time Convolution
- Pulse Transfer Function
- Initial and Final Value
- Stability of Linear Discrete-Time Systems
