

Table of Contents

1. Introduction

- Overview of electrical power engineering
- Electrical power equipment and systems
- Production, transmission, distribution and utilization of electrical energy
- Role of the electrical power engineer

2. Principles of Electrical Engineering

- Nomenclature and units
- Electromagnetic fields
 - Electric fields
 - Electric currents
 - Magnetic fields
 - Electromagnetism
- Electrical circuits
 - DC circuits
 - AC circuits
 - Magnetic circuits
- Fundamental electrical engineering principles

3. Materials for Electrical Engineering

- Conducting materials
- Insulating materials
- Magnetic materials
- Dielectric materials
- Electrical and thermal properties of materials
- Material selection for electrical equipment
- Insulation systems and insulation coordination

4. Measurements and Instrumentation

- Electrical measurement principles
- Measuring instruments
- Measurement of voltage and current
- Measurement of power and energy
- Measurement of electrical quantities
- Instrument transformers
- Measurement accuracy and errors
- Instrumentation systems

5. Generators

- Principles of electrical generators
- AC generators / alternators
- Construction of synchronous generators
- Generator characteristics
- Generator excitation systems
- Generator cooling
- Generator operation and maintenance
- Generator protection
- Standards and testing

6. Transformers

- Transformer principles
- Transformer construction
- Transformer types
- Transformer ratings
- Transformer losses and efficiency
- Transformer cooling
- Transformer insulation
- Transformer connections
- Transformer testing
- Transformer protection
- Tap-changing transformers

7. Switchgear

- Introduction to switchgear
- Switchgear components
- Circuit breakers
- Disconnectors and isolators
- Earthing switches
- High-voltage switchgear
- Low-voltage switchgear
- Switchgear testing
- Insulation coordination

8. Fuses and Protection Relays

- Electrical protection principles
- Fuses
- Protection relays
- Overcurrent protection
- Differential protection
- Distance protection
- Earth-fault protection
- Generator and transformer protection

- Protection coordination
- Relay testing

9. Wires and Cables

- Electrical conductors
- Cable construction
- Cable insulation
- Low-voltage cables
- High-voltage cables
- Cable ratings
- Cable installation
- Cable testing
- Cable faults and protection

10. Motors, Motor Control and Drives

- Electrical motors
- AC motors
- DC motors
- Induction motors
- Synchronous motors
- Motor characteristics
- Motor starting
- Motor control
- Speed control
- Electric drives
- Motor protection
- Energy-efficient motor systems

11. Power Electronic Circuits and Devices

- Power semiconductor devices
- Diodes
- Thyristors
- Power transistors
- Power electronic circuits
- Rectifiers
- Inverters
- AC controllers
- DC–DC converters
- Applications of power electronics
- Power electronic drives

12. Batteries and Fuel Cells

- Principles of electrochemical energy storage
- Primary and secondary batteries
- Battery construction
- Battery characteristics
- Battery charging
- Battery applications
- Lead-acid batteries
- Nickel-based batteries
- Fuel cells
- Applications of fuel cells
- Battery and fuel-cell safety

13. The Power System

- Structure of the electrical power system
- Power generation
- Power transmission
- Power distribution
- Power-system operation
- Power-system planning
- Load characteristics
- Power-system stability
- Voltage control
- Reactive power
- Power-system faults
- System protection
- Earthing
- Interconnection of power systems

14. Power Quality and Electromagnetic Compatibility

- Introduction to power quality
- Voltage disturbances
- Voltage fluctuations
- Harmonics
- Voltage dips and interruptions
- Transients
- Electromagnetic interference
- Electromagnetic compatibility (EMC)
- Power-quality measurement
- Power-quality improvement
- Standards and regulations

15. Electricity and Potentially Explosive Atmospheres

- Electrical equipment in hazardous areas

- Classification of hazardous locations
- Flammable gases and vapours
- Dust and explosive atmospheres
- Explosion protection
- Intrinsically safe equipment
- Electrical installation requirements
- Equipment selection for hazardous areas
- Standards and certification

16. Principles of Electrical Safety

- Electrical hazards
- Electric shock
- Protection against electric shock
- Earthing and bonding
- Electrical isolation
- Protective devices
- Safe electrical installations
- Electrical safety procedures
- Safety in operation and maintenance
- Standards and regulations

Index
