

Contents

1. **Introduction**
 - Definition of Image Processing
 - Importance of Parallel Computing
 - Objectives of Parallel Image Processing
2. **Fundamentals of Digital Image Processing**
 - Digital Images and Pixel Representation
 - Image Types (Binary, Grayscale, Color)
 - Basic Image Operations
3. **Parallel Computing Concepts**
 - Definition of Parallel Computing
 - Parallel Architectures
 - Data Parallelism and Task Parallelism
4. **Parallel Image Processing Techniques**
 - Image Partitioning
 - Distributed Processing
 - Synchronization and Communication Mechanisms
5. **Tools and Technologies**
 - Multithreading with OpenMP
 - Message Passing Interface (MPI)
 - GPU Computing with CUDA and OpenCL
 - Modern Parallel Processing Frameworks
6. **Applications of Parallel Image Processing**
 - Computer Vision
 - Medical Imaging
 - Remote Sensing
 - Video Surveillance
 - Artificial Intelligence and Deep Learning
7. **Performance Evaluation**
 - Execution Time Analysis
 - Speedup and Efficiency
 - Scalability Assessment
 - Benchmarking Methods
8. **Challenges and Limitations**
 - Memory Management
 - Load Balancing
 - Communication Overhead
 - Hardware Constraints
9. **Conclusion and Future Perspectives**
 - Summary of Key Findings
 - Emerging Trends
 - Future Research Directions
