

Contents

1. **Electrical Conductivity of Dielectrics**
 - Conduction mechanisms
 - Volume and surface conductivity
 - Effects of temperature, humidity, and impurities
2. **Polarization of Dielectric Materials**
 - Electronic polarization
 - Ionic polarization
 - Dipolar (orientation) polarization
 - Interfacial polarization
 - Dielectric permittivity
3. **Dielectric Losses**
 - Dielectric dissipation factor
 - Dielectric relaxation
 - Frequency and temperature dependence
4. **Dielectric Breakdown**
 - Breakdown in gases
 - Breakdown in liquids
 - Breakdown in solids
 - Dielectric strength
5. **Nonlinear Dielectrics and Ferroelectricity**
 - Ferroelectric materials
 - Electric-field effects
 - Hysteresis phenomena
 - Barium titanate and related materials
6. **Effects of Moisture on Dielectrics**
 - Water absorption
 - Insulation degradation
 - Aging processes
7. **Radiation Effects on Dielectric Materials**
 - Structural modifications
 - Electrical property degradation
 - Applications in radiation environments
8. **Thermal and Physicochemical Properties**
 - Thermal conductivity
 - Thermal stability
 - Thermal aging of insulating materials
9. **Applications of Dielectric Materials**
 - Electrical insulation
 - Capacitors
 - Power cables
 - Ceramic, glass, and polymer dielectrics
