

Contents

Part I: Semiconductor Fundamentals

1. **Basic Physical Concepts**
 - Atomic structure
 - Electrical conduction
2. **Semiconductor Devices**
 - PN junction
 - Bipolar Junction Transistor (BJT)
 - Junction Field-Effect Transistor (JFET)
 - Metal-Oxide-Semiconductor Field-Effect Transistor (MOSFET)
3. **Device Construction and Characteristics**
 - PN diodes
 - Zener diodes
 - Bipolar transistors
 - JFETs
 - MOSFETs
4. **Integrated Circuits**
 - Types of integrated circuits
 - Fabrication processes
 - Active and passive integrated components

Part II: Semiconductor Applications

5. **Rectification and Power Supplies**
 - Rectifiers
 - Smoothing filters
 - Voltage-regulated power supplies
6. **Low-Frequency Amplifiers**
 - FET amplifiers
 - BJT amplifiers
 - Power amplifiers
 - Feedback techniques
7. **Oscillators**
 - RC oscillators
 - Tuned oscillators
 - Astable multivibrators
8. **High-Frequency Effects and Circuits**
 - High-frequency transistor limitations
 - RF amplifiers
 - RF oscillators

Part III: Transistor Modeling

9. **Equivalent Models of Bipolar Transistors**
 - h-parameter model
 - y-parameter model
10. **Physical Models of Bipolar Transistors**

- T model
- Hybrid- π model

11. Equivalent Models of FETs

- Small-signal models
- Circuit configurations
- Advanced applications
