

Table of Contents

- 1. Introduction to Electrical Power Utilization**
 - Electrical power and energy
 - Types of electrical loads
 - Characteristics of electrical loads
 - Selection and utilization of electrical power
- 2. Electric Heating**
 - Principles of electric heating
 - Resistance heating
 - Induction heating
 - Dielectric heating
 - Infrared and arc heating
 - Industrial applications
- 3. Electric Welding**
 - Principles of electric welding
 - Resistance welding
 - Arc welding
 - Welding equipment
 - Applications and safety
- 4. Electric Drives**
 - Introduction to electric drives
 - Selection of motors
 - Characteristics of electric motors
 - Starting and braking
 - Speed control of motors
- 5. Industrial Motor Applications**
 - Motors for industrial machinery
 - Conveyors and pumps
 - Cranes and hoists
 - Machine tools
 - Compressors and fans
- 6. Electric Traction**
 - Fundamentals of electric traction
 - Traction motors
 - Traction power supply
 - Braking systems
 - Railway and urban transportation applications
- 7. Illumination Engineering**
 - Fundamentals of light and vision
 - Photometric quantities
 - Light sources
 - Incandescent and discharge lamps
 - LED lighting
 - Lighting calculations
 - Interior and exterior illumination

8. Industrial and Commercial Lighting

- Lighting requirements
- Lighting design
- Illumination levels
- Energy-efficient lighting
- Lighting control systems

9. Electrochemical Processes

- Principles of electrolysis
- Electroplating
- Electrorefining
- Industrial electrochemical applications

10. Energy Efficiency and Electrical Safety

- Efficient utilization of electrical energy
- Load management
- Power-factor improvement
- Electrical protection
- Safety in electrical installations
