

# Contents :

1. **Introduction**
  - MOS systems overview
  - Historical development
  - Semiconductor fundamentals
2. **Field Effect**
  - Surface electric fields
  - Charge distribution
  - Surface potential
  - Field-effect phenomena
3. **Metal-Oxide-Silicon Capacitor at Low Frequencies**
  - MOS capacitor theory
  - Accumulation, depletion, inversion
  - Capacitance-voltage characteristics
  - Low-frequency analysis
4. **Metal-Oxide-Silicon Capacitor at Intermediate and High Frequencies**
  - High-frequency C–V measurements
  - AC response
  - Interface effects
  - Frequency dependence
5. **Extraction of Interface Trap Properties from Conductance**
  - Conductance techniques
  - Interface state density
  - Trap characterization
  - Measurement procedures
6. **Interfacial Nonuniformities**
  - Oxide defects
  - Surface irregularities
  - Charge fluctuations
  - Nonuniform interface properties
7. **Experimental Evidence for Interface Trap Properties**
  - Experimental characterization
  - Trap energy levels
  - Carrier interactions
  - Surface-state effects
8. **Extraction of Interface Trap Properties from Capacitance**
  - C–V analysis methods
  - Trap density calculations
  - Frequency response techniques
9. **Measurement of Silicon Properties**
  - Carrier concentration
  - Mobility measurements
  - Resistivity analysis
  - Semiconductor characterization
10. **Charges, Barrier Heights, and Flatband Voltage**
  - Oxide charges
  - Flatband conditions
  - Work-function differences
  - Threshold voltage effects

## 11. Charge Trapping in the Oxide

- Oxide defects
- Electron trapping
- Reliability problems
- Radiation effects

## 12. Instrumentation for Measuring Capacitor Characteristics

- Experimental setups
- Measurement instrumentation
- Electrical testing techniques

## 13. Oxidation of Silicon — Oxidation Kinetics

- Thermal oxidation
- Oxide growth mechanisms
- Diffusion models
- Kinetic equations

## 14. Oxidation of Silicon — Technology

- Fabrication processes
- Oxide quality control
- Semiconductor processing

## 15. Control of Oxide Charges

- Reduction of interface defects
- Process optimization
- Stability improvement

## 16. Models of the Interface

- Si–SiO<sub>2</sub> interface models
- Interface-state theories
- Electronic structure models

## 17. Appendices

- Mathematical derivations
- Physical constants
- Semiconductor parameters
- Measurement formulas

## 18. Indexes

- Subject index
- Symbol index
