

Contents :

1. **Preface**
2. **Introduction**
 - Aim of the book
 - Evolution of wireless communications
 - Pioneering era of wireless communications
 - 1G cellular systems
 - 2G cellular systems
 - 3G cellular systems
 - Wireless LAN and PAN networks
 - Wireless metropolitan area networks
 - Next-generation broadband wireless systems
 - Historical notes on multicarrier transmission
 - Outline of the book
3. **Fundamentals of OFDM/OFDMA Systems**
 - Mobile channel modeling
 - Parameters of wireless channels
 - Fading channel categorization
 - Channel fading mitigation methods
 - Time-selective and frequency-selective fading
 - OFDM system architecture
 - Discrete-time OFDM model
 - Spectral efficiency
 - Advantages and drawbacks of OFDM
 - OFDM-based multiple access schemes
 - Channel coding and interleaving
4. **Time and Frequency Synchronization**
 - Sensitivity to timing and frequency errors
 - Timing offset effects
 - Frequency offset effects
 - Synchronization for downlink transmission
 - Timing acquisition and tracking
 - Frequency acquisition techniques
 - Subspace-based methods
5. **Channel Estimation and Equalization**
 - Pilot-assisted channel estimation
 - Least squares and MMSE estimation
 - Adaptive channel tracking
 - Frequency-domain equalization
 - EM-based channel estimation
 - Performance analysis
6. **Joint Synchronization, Channel Estimation and Data Symbol Detection in OFDMA Uplink**
 - Uncoded OFDMA uplink
 - Signal models
 - Iterative detection and synchronization
 - Practical implementation issues
 - Trellis-coded OFDMA uplink
 - Performance assessment

7. Dynamic Resource Allocation

- Resource allocation in single-user OFDM systems
- Water-filling principle
- Rate and margin maximization
- Power allocation and bit loading
- Greedy algorithms
- Subband adaptation
- Open-loop and closed-loop adaptation
- Multiuser OFDM resource allocation
- Multiaccess water-filling
- Max-min optimization
- Dynamic resource allocation for MIMO-OFDMA
- Cross-layer design

8. Peak-to-Average Power Ratio (PAPR) Reduction

- PAPR definitions
- Statistical properties of PAPR
- Amplitude clipping
- Clipping and filtering techniques
- Clipping noise mitigation
- Selected Mapping (SLM)
- Partial Transmit Sequence (PTS)
- Coding methods
- Tone reservation and tone injection
- PAPR reduction for OFDMA systems
- AGC unit design

9. Bibliography

10. Index
