- List of Abbreviations
- List of Symbols
- About the Authors

Chapter 1. Introduction to Multi-Antenna Communications

- Fundamentals of multi-antenna systems
- MIMO communication principles
- Diversity and multiplexing concepts
- Benefits and challenges of MIMO systems

Chapter 2. Physical MIMO Channel Modeling

- Wireless propagation mechanisms
- Physical channel modeling
- Multipath and scattering effects
- Spatial and temporal channel characteristics
- Real-world MIMO environments

Chapter 3. Analytical MIMO Channel Representations for System Design

- Mathematical channel models
- Statistical channel representations
- Correlation models
- Analytical tools for MIMO system design

Chapter 4. Mutual Information and Capacity of Real-World Random MIMO Channels

- Information-theoretic foundations
- Mutual information
- Channel capacity analysis
- Impact of fading and correlation
- Capacity in realistic propagation scenarios

Chapter 5. Space-Time Coding over i.i.d. Rayleigh Flat Fading Channels

- Overview of space-time encoders
- System model
- Error-probability design methodology

- Information-theoretic design methodology
- Space-Time Block Codes (STBC)
- Space-Time Trellis Codes (STTC)

Chapter 6. Error Probability in Real-World MIMO Channels

- Error-rate analysis
- Pairwise error probability
- Influence of realistic propagation conditions
- Performance evaluation methods

Chapter 7. Space-Time Coding over Real-World MIMO Channels with No Transmit Channel Knowledge

- Coding without transmitter channel state information (CSI)
- Robust code design
- Performance under realistic channels
- Diversity and coding gains

Chapter 8. Space-Time Coding with Partial Transmit Channel Knowledge

- Partial CSI at the transmitter
- Precoding methods
- Feedback techniques
- Adaptive transmission strategies
- Antenna selection and coding optimization

Chapter 9. Space-Time Coding for Frequency-Selective Channels

- Frequency-selective fading
- Wideband and broadband channels
- MIMO-OFDM systems
- Coding and equalization methods
- Space-time-frequency techniques

Appendices

Appendix A. Useful Mathematical and Matrix Properties

Appendix B. Complex Gaussian Random Variables and Matrices

Appendix C. Stanford University Interim (SUI) Channel Models

Appendix D. Antenna Coupling Model

Appendix E. Derivation of the Average Pairwise Error Probability
