

Contents :

Front Matter

- Preface
- Acknowledgements
- Introduction

Chapter 1 — Introduction

- Overview of Synthetic Aperture Radar (SAR)
- Remote sensing applications
- SAR image interpretation
- Objectives of SAR analysis

Chapter 2 — Principles of SAR Image Formation

- Radar fundamentals
- SAR geometry
- Resolution concepts
- Signal processing in SAR
- Range and azimuth compression
- Doppler processing
- Image formation algorithms

Chapter 3 — Image Defects and Their Correction

- Geometric distortions
- Radiometric distortions
- Motion compensation
- Speckle effects
- Calibration methods
- Autofocus techniques
- Error correction procedures

Chapter 4 — Fundamental Properties of SAR Images

- Speckle statistics
- Coherent imaging properties
- Backscatter characteristics
- Texture and clutter
- Image resolution and contrast
- Statistical interpretation of SAR data

Chapter 5 — Data Models

- Statistical models for SAR imagery
- Gaussian and non-Gaussian models
- Gamma and K-distributions
- Texture models
- Multilook processing
- Parameter estimation methods

Chapter 6 — RCS Reconstruction Filters

- Radar Cross Section (RCS) reconstruction
- Filtering techniques
- MMSE filtering
- Adaptive filters
- Speckle reduction
- Super-resolution approaches

Chapter 7 — RCS Classification and Segmentation

- Image segmentation
- Feature extraction
- Classification algorithms
- Edge detection
- Region analysis
- Clutter discrimination

Chapter 8 — Texture Exploitation

- Texture analysis methods
- Statistical texture measures
- Spatial correlation
- Texture-based classification
- Surface characterization

Chapter 9 — Correlated Textures

- Correlation models
- Spatial statistics
- Correlated clutter analysis
- Modeling terrain textures
- Image interpretation techniques

Chapter 10 — Target Information

- Target detection
- Feature identification
- Shape and structure analysis
- Target recognition methods
- CFAR detection techniques

Chapter 11 — Information in Multichannel SAR Data

- Multichannel SAR systems
- Polarimetric SAR (PolSAR)
- Interferometric SAR (InSAR)
- Polarimetric measurements
- Coherence analysis
- Multidimensional SAR information extraction

Chapter 12 — Analysis Techniques for Multidimensional Data

- Multidimensional signal analysis
- Eigenvector methods
- Covariance analysis
- Feature-space methods
- Advanced SAR processing algorithms

Chapter 13 — Classification of SAR Imagery

- Supervised classification
- Unsupervised classification
- Bayesian approaches
- Neural-network methods
- Contextual classification
- Performance evaluation

Chapter 14 — Current Status and Future Prospects

- Advances in SAR technology
- Emerging SAR applications
- Future research directions
- Spaceborne and airborne SAR trends
