

Contents :

Preface

Chapter 1 – Introduction

- 1.1 Random Signals
- 1.2 Spectral Estimation
- 1.3 Signal Modeling
- 1.4 Adaptive Filtering
- 1.5 Array Processing
- 1.6 Organization of the Book

Chapter 2 – Fundamentals of Discrete-Time Signal Processing

- 2.1 Discrete-Time Signals
- 2.2 Transform-Domain Representation of Deterministic Signals
- 2.3 Discrete-Time Systems
- 2.4 Minimum-Phase and System Invertibility
- 2.5 Lattice Filter Realizations
- 2.6 Summary
- Problems

Chapter 3 – Random Variables, Vectors, and Sequences

- 3.1 Random Variables
- 3.2 Random Vectors
- 3.3 Discrete-Time Stochastic Processes
- 3.4 Linear Systems with Stationary Random Inputs
- 3.5 Whitening and Innovations Representation
- 3.6 Principles of Estimation Theory
- 3.7 Summary
- Problems

Chapter 4 – Linear Signal Models

- 4.1 Introduction
- 4.2 All-Pole Models (AR Models)
- 4.3 All-Zero Models (MA Models)
- 4.4 Pole-Zero Models (ARMA Models)
- 4.5 Models with Poles on the Unit Circle
- 4.6 Cepstrum of Pole-Zero Models
- 4.7 Summary
- Problems

Chapter 5 – Nonparametric Power Spectrum Estimation

- 5.1 Spectral Analysis of Deterministic Signals
- 5.2 Estimation of the Autocorrelation of Stationary Random Signals
- 5.3 Estimation of the Power Spectrum of Stationary Random Signals
- 5.4 Joint Signal Analysis
- 5.5 Multitaper Power Spectrum Estimation
- 5.6 Summary
- Problems

Chapter 6 – Optimum Linear Filters

- 6.1 Optimum Signal Estimation
- 6.2 Linear Mean-Square Error Estimation
- 6.3 Solution of the Normal Equations
- 6.4 Optimum FIR Filters
- 6.5 Linear Prediction
- 6.6 Optimum IIR Filters
- 6.7 Summary
- Problems

Chapter 7 – Algorithms and Structures for Optimum Linear Filters

- 7.1 Wiener Filter Algorithms
- 7.2 Levinson and Levinson–Durbin Algorithms
- 7.3 Schur Algorithm
- 7.4 Kalman Filtering
- 7.5 Lattice Structures
- 7.6 Summary
- Problems

Chapter 8 – Least-Squares Filtering and Prediction

- 8.1 Least-Squares Estimation
- 8.2 Normal Equations
- 8.3 Orthogonalization Methods
- 8.4 Singular Value Decomposition (SVD)
- 8.5 Recursive Least Squares Concepts
- 8.6 Summary
- Problems

Chapter 9 – Signal Modeling and Parametric Spectrum Estimation

- 9.1 Parametric Signal Models
- 9.2 Autoregressive Spectral Estimation
- 9.3 Moving-Average and ARMA Modeling
- 9.4 Yule–Walker Methods
- 9.5 Burg Method
- 9.6 High-Resolution Spectral Estimation

9.7 Summary
Problems

Chapter 10 – Adaptive Filters

10.1 Adaptive Filtering Fundamentals
10.2 Steepest Descent Algorithm
10.3 LMS Algorithm
10.4 Normalized LMS Algorithm
10.5 Recursive Least Squares (RLS) Algorithm
10.6 Fast RLS Algorithms
10.7 Kalman-Based Adaptive Filters
10.8 Adaptive Filter Applications
10.9 Summary
Problems

Chapter 11 – Array Processing

11.1 Array Signal Models
11.2 Beamforming
11.3 Optimum and Adaptive Beamforming
11.4 Direction-of-Arrival Estimation
11.5 Spatial Spectrum Estimation
11.6 Array Processing Applications
11.7 Summary
Problems

Chapter 12 – Advanced Topics

12.1 Higher-Order Statistics
12.2 Blind Deconvolution
12.3 Blind Equalization
12.4 Fractional Signal Models
12.5 Fractal Signal Models
12.6 Emerging Topics in Statistical Signal Processing
12.7 Summary
Problems

Appendices

- Matrix and Linear Algebra Review
- Probability and Statistics Review
- Mathematical Tables and Identities
- Bibliography
- Index
