

Contents :

Preface

Optical Properties and Spin-Spin Exchange Interactions

- Optical studies of diluted magnetic semiconductors
- Exchange interactions in semimagnetic materials
- Magneto-optical phenomena

Magnetic Properties of Mn-Alloyed II–VI Compounds

- Magnetic behavior of CdMnTe, CdMnSe, ZnMnSe
- Susceptibility and exchange coupling
- Spin-glass and antiferromagnetic effects

Theory, Structure and Transport

- Electronic band structure
- Carrier transport phenomena
- Exchange interaction models
- Magnetotransport effects

Lead-Salt and Fe-Alloy Semimagnetic Semiconductors

- Fe-based semimagnetic compounds
- Lead-salt magnetic semiconductors
- Electronic and magnetic properties

New Diluted Magnetic Semiconductor Materials

- Novel DMS compounds
- Crystal growth and characterization
- Material synthesis techniques

Frontiers of Infrared/DMS Materials Science

- Infrared-sensitive semimagnetic materials
- Optical transitions and spectroscopy
- Material engineering

Infrared Detector Applications

- DMS materials for infrared detection
- Device structures and performance

Infrared Source Applications

- Infrared emitters based on semimagnetic semiconductors
- Optoelectronic applications

Thin Films and Heterostructures

- Epitaxial growth techniques
- Layered magnetic semiconductor structures
- Quantum confinement effects

Atomic Layer Epitaxy of Diluted Magnetic Semiconductors

- Growth by atomic layer epitaxy
- Thin-film fabrication methods

Long-Range Magnetic Interactions

- Magnetic ordering mechanisms
- Exchange interactions in diluted systems
- Spin dynamics and magnetic correlations
