Preface

Acknowledgements

Part I. Infrared Materials Based on Group III–V Compounds

1. **Epitaxial Semiconductor Structures for the Infrared: Where Are We Now?** — *Morton B. Panish* (Invited Paper)
2. **Defects in Mg-Doped InP and GaInAs Grown by OMVPE** — *Fred R. Bacher, H. Cholan, Wallace B. Leigh*

Part II. Materials Requirements for Infrared Detectors, Imagers, and Sources

3. **Materials Requirements for IR Detectors and Imagers** — *M. A. Kinch*
4. **Development of HgCdTe for LWIR Imagers** — *Joseph L. Schmit*
5. **Modeling of HgCdTe Heterojunction Devices** — *Ken Zanio, Ken Hay*
6. **Preparation and Applications of Lead Chalcogenide Diode Lasers** — *Dale L. Partin*
7. **Epitaxial IV–VI Semiconductor Films** — *T. K. Chu, A. Martinez*

Part III. Issues in Bulk Crystal Growth of Infrared Materials and Structure–Property Relations

8. **Issues in the Growth of Bulk Crystals of Infrared Materials** — *K. J. Bachmann, H. Goslowsky*
9. **Bulk Crystal Growth of HgCdTe for Avalanche Photodiode Applications** — *T. Nguyen Duy, A. Durand, J. L. Lyot*
10. **Structure–Property Relationships in Semiconductor Alloys** — *A. Sher, M. A. Berding, S. Krishnamurthy, M. van Schilfgaarde, A.-B. Chen, W. Chen*

Part IV. HgCdTe Materials and Devices

Topics in this section include:

- HgCdTe crystal growth
- Material characterization
- Defect control
- Carrier transport
- Heterojunction structures
- Long-wavelength infrared (LWIR) detectors
- Avalanche photodiodes
- Detector performance optimization

Part V. InSb Infrared Detector Materials

Representative paper:

- **InSb: A Key Material for IR Detector Applications** — *S. R. Jost, V. F. Meikleham, T. H. Myers*

Additional papers cover:

- Liquid-phase epitaxy of InSb
- Minority-carrier lifetime improvement
- Detector-grade InSb material
- Mid-wave infrared detector technology (3–5 μm)

Part VI. Lead-Salt and IV–VI Infrared Materials

Topics include:

- PbS, PbSe, PbTe materials
- Lead-chalcogenide diode lasers
- IV–VI semiconductor epitaxy
- Infrared source applications
- Optical and electrical properties of narrow-bandgap materials

Part VII. Thin Films, Epitaxy and Heterostructures

Topics include:

- Molecular Beam Epitaxy (MBE)
- Organometallic Vapor Phase Epitaxy (OMVPE)
- Thin-film growth techniques
- Heterostructure engineering
- Defect characterization
- Device-quality infrared materials

Part VIII. Infrared Sources and Device Applications

Topics include:

- Infrared emitters
- Semiconductor lasers
- Detector arrays
- Imaging systems
- Infrared focal-plane technologies
- Military and space applications
- Advanced infrared optoelectronic devices
