

Contents :

Foreword

Preface

Notation

Chapter 1. Dynamic Systems

- 1.1 System concepts
- 1.2 Open-loop systems
- 1.3 "Feedback"—closed-loop systems
- 1.4 The phase-plane diagram

Chapter 2. Route Capacity—Laws for Vehicle Following

- 2.1 Lane capacity
- 2.2 Car-following theory
- 2.3 Automatic vehicle systems

Chapter 3. Control of Vehicle Spacing—Railway Signalling

- 3.1 Necessity for signalling on railways
- 3.2 The "Train-order" system
- 3.3 The "Block" system
- 3.4 Lock and block
- 3.5 Multiple-aspect signalling

Chapter 4. Problems of Congestion—Traffic Regulation

- 4.1 Random events
- 4.2 Queues—Poisson arrivals—constant service times
- 4.3 Exponential service times
- 4.4 Effect of delays on headway of signalled systems
- 4.5 Statistical aspects of car-following behaviour
- 4.6 Traffic waves

Chapter 5. Computer Aids to Operation—Traffic Surveillance and Control

- 5.1 Application of digital computers
- 5.2 Continuous Progress Control (C.P.C.), Dynamic programming
- 5.3 Optimum train sequence
- 5.4 Traffic surveillance and control
- 5.5 Control of cascaded vehicles
- 5.6 System flow charts
- 5.7 Train describers

Chapter 6. Measurement of Power—Analogue Computing

- 6.1 Mechanical manipulation of data
- 6.2 Equivalent mechanical and electrical quantities
- 6.3 Potential and flow
- 6.4 Operational amplifiers
- 6.5 Vehicle suspension analogy
- 6.6 Application to strings of vehicles
- 6.7 Hybrid computers
- 6.8 Simulation of service environment

Chapter 7. Vehicle Detection

- 7.1 Presence detectors
- 7.2 Track circuits
- 7.3 Jointless track circuits
- 7.4 Guided radar

Chapter 8. Vehicle Identification

- 8.1 The "Identra" system
- 8.2 Bus electronic scanning indicator
- 8.3 Automatic wagon-recording system

Chapter 9. Communication of Control Signals to Moving Vehicles

- 9.1 Automatic warning systems—cab signalling
- 9.2 The "Indusi" system
- 9.3 The "Signum" system
- 9.4 Beacon devices
- 9.5 Coded track circuit
- 9.6 Professor Poupe's coded track circuit system
- 9.7 Continuous conductors in the track
- 9.8 Magnetic and inductive loop systems

Chapter 10. Interlocking—Sequence Control

- 10.1 Mechanical interlocking
- 10.2 Boolean algebra

Chapter 11. Sorting and Marshalling

- 11.1 The hump yard
- 11.2 Automatic retarders
- 11.3 Dowty retarders

Chapter 12. Control of Acceleration and Power

- 12.1 Limitations
- 12.2 Equations of motion
- 12.3 Resistance coefficients

- 12.4 Distance-time relationships
- 12.5 Coasting
- 12.6 Engine-speed control
- 12.7 Automatic transmissions
- 12.8 Electric motive power control
- 12.9 Transducers in power control
- 12.10 Induction motors
- 12.11 Wheel-slip control
- 12.12 Diesel power control
- 12.13 Adaptive control
- 12.14 Shock factors in acceleration

Chapter 13. Control of Braking

- 13.1 Forms of braking
- 13.2 Physiological aspects
- 13.3 Slip control
- 13.4 On-tread braking
- 13.5 Off-tread braking
- 13.6 Servo actuation
- 13.7 Compressed-air brake
- 13.8 Electro-pneumatic brake
- 13.9 Vacuum brake

Chapter 14. Steering—Directional Stability

- 14.1 Steering
- 14.2 Directional stability
- 14.3 Hertzian contact
- 14.4 Running of coned wheels
- 14.5 Steering by flanges on sharp curves
- 14.6 Bogie oscillation
- 14.7 High-speed curve negotiation
- 14.8 Passenger comfort

Chapter 15. Automatic Railways

- 15.1 General principles
- 15.2 Human contribution under present systems
- 15.3 Systems for intensively used passenger lines
- 15.4 Existing installations
- 15.5 High-speed systems

Chapter 16. Possibilities for the Future

- 16.1 Need for new transport modes
- 16.2 Highway control improvements
- 16.3 High-capacity transport systems
- 16.4 Mono- and duorails
- 16.5 Transit expressways

- 16.6 Steerable wheels
- 16.7 Blake system
- 16.8 Air-cushion support
- 16.9 Linear motors

Appendix I. Theory of Control

- 1. Equivalence of dynamic and active systems
- 2. Literature available
- 3. Laplace transform and transfer functions
- 4. Time delay effects
- 5. Stability criteria
- 6. Root-locus plots
- 7. Nyquist and Bode methods
- 8. Common nonlinearities
- 9. Describing function
- 10. Inverse Nyquist (Whitely) diagram
- 11. Lyapunov's second method
- 12. Random inputs
- 13. Sampled-data (on-line) control

Appendix II. SI Units

- 1. Advantages and use of SI units
- 2. Conversion factors
