

Contents :

Chapter 1: Introduction

- Digital communication systems
- Communication channels
- AWGN channels
- Bandlimited channels
- Fading channels
- Basic modulation methods
- Modulation selection criteria
- Power efficiency
- Bandwidth efficiency
- System complexity

Chapter 2: Baseband Modulation (Line Codes)

- Differential coding
- NRZ and RZ codes
- Pseudoternary codes
- Manchester coding
- Miller coding
- Power spectral density
- Bit error performance
- Block line codes
- Pulse-time modulation

Chapter 3: Frequency Shift Keying (FSK)

- Binary FSK
- M-ary FSK
- Modulators and demodulators
- Coherent detection
- Noncoherent detection
- Error performance
- Synchronization

Chapter 4: Phase Shift Keying (PSK)

- BPSK
- Differential BPSK
- MPSK
- QPSK
- DQPSK
- OQPSK
- $\pi/4$ -QPSK
- Carrier recovery
- Clock recovery
- Phase and timing errors

Chapter 5: Minimum Shift Keying and MSK-Type Modulations

- MSK principles
- Spectral properties
- Modulators and demodulators
- Synchronization
- Serial MSK (SMSK)
- MSK-derived schemes
- Spectral analysis

Chapter 6: Continuous Phase Modulation (CPM)

- CPM signal representation
- Phase trellis and state models
- Spectral density
- Maximum-likelihood detection
- Modulators
- Demodulators
- GMSK
- Synchronization methods

Chapter 7: Multi-h Continuous Phase Modulation

- Multi-h CPM signals
- Power spectra
- Distance properties
- Error probability
- Modulator structures
- Joint synchronization and detection
- Enhanced MHPM schemes

Chapter 8: Quadrature Amplitude Modulation (QAM)

- QAM signal description
- Signal constellations
- Square QAM
- Spectral density
- Modulators
- Demodulators
- Error probability
- Synchronization techniques

Chapter 9: Nonconstant-Envelope Bandwidth-Efficient Modulations

- Spectrally efficient modulation methods
- Quasi-bandlimited modulation
- Advanced QPSK variants
- Superposed-QAM
- Quadrature-Quadrature PSK
- Performance comparisons

Chapter 10: Performance of Modulations in Fading Channels

- Rayleigh fading channels
- Rician fading channels
- Frequency-selective fading
- QPSK in fading channels
- QAM in fading channels
- Diversity techniques
- Equalization methods
- Channel estimation

Appendices

Appendix A: Power Spectral Densities of Signals

Appendix B: Detection of Signals

Bibliography and Index
