Invited Papers

1. **Asymptotic Methods in the Optimal Control of Distributed Systems**
2. **Some Recent Applications of Distributed Parameter Control Theory—A Survey**

Mathematical Foundations

3. Dual Variational Inequalities for Extremal Eigenvalue Problems
4. Stochastic Differential Equations in Hilbert Space and Their Application to Delay Systems
5. Linear Quadratic Optimal Control over an Infinite Time Horizon
6. Initial-Value Control of the Korteweg–de Vries Equation
7. Reachability and Semigroup Systems
8. Time Invariance of Reachable Sets
9. Semigroup Methods for Boundary Value Problems
10. Boundary Value Control
11. Stability of Nonlinear Distributed Parameter Systems
12. Stability of Abstract Evolution Equations
13. Infinite-Dimensional Analysis
14. Lyapunov Functionals and Path Integral Methods
15. Functional Analysis Interpretation of Lyapunov Stability
16. Stability Conditions and Controller Design
17. Method of Multipliers for Distributed Parameter Systems

Numerical and Computational Methods

18. Digital Transfer Matrix Methods
19. Numerical Approximation Techniques
20. Finite Difference Approximation
21. State and Control Constraints
22. Optimal Feedback Controller Design

Estimation and Adaptive Control

23. Adaptive Open-Loop Control
24. State Estimation
25. Filtering of Distributed Parameter Systems
26. Distributed Parameter Identification
27. Observer Design

Engineering Applications

28. Optimal Control of Chemical Plants with Random Breakdowns
29. Modal Control of Parallel and Counterflow Heat Exchangers
30. Vector Performance Index Control
31. Real-Time State Estimation for Heated Ingots
32. Stability of Fixed-Bed Reactors
33. Optimal Control of Gas Distribution Networks
34. Distributed Models of Biological Systems
35. Optimal Structural Design
36. Diffusive System Applications
37. Simplified Optimum Control of Distributed Parameter Systems
