

SOMMAIRE

Design for RCC Slabs – A Ready Reckoner

K. C. Jain — Laxmi Publications — ISBN 8170083729 — 368 pages

Table / Section 1 — Design data and coefficients

- Characteristic loads for slab — p. 8
- Factored load coefficients — slab thickness 100 mm — p. 9
- Factored load coefficients — slab thickness 120 mm — p. 10
- Factored load coefficients — slab thickness 140 mm — p. 11
- Factored load coefficients — slab thickness 160 mm — p. 12
- Factored load coefficients — slab thickness 180 mm — p. 13
- Shear strength of concrete — p. 23
- Bending Moment Coefficient for rectangular panels supported on four sides — p. 24
- Bending Moment Coefficients for slabs spanning in two directions at right angles — p. 40
- Bending Moments Coefficients for various spans — p. 46
- Bending Moments Coefficients for One-way Slabs: Two Continuous Spans — p. 47
- Bending Moments Coefficients for One-way Slabs: Three or more continuous spans — p. 54
- Coefficients for concentrated load on slabs — p. 58

Table / Section 2 — Design procedures and applications

The Google Books contents preview indicates the next major section begins at p. 71. The available preview does not expose every intermediate heading, so the detailed headings below are not presented as verbatim publisher text.

- Design provisions and calculation procedures for reinforced concrete slabs — from p. 71
- Design examples / ready-reckoner data for practical slab calculations
- Design charts for concrete grade M25 and steel grade Fe415 — p. 297
- Reference tables and design aids for practical RCC slab design
- Copyright / end matter
