

# SOMMAIRE - Engineering Plasticity by Mathematical Programming

Auteur : M.Z. Cohn (ed.), avec G. Maier

## Partie I : Programmation Mathématique & Fondamentaux

1. Mathematical Programming .....	1-21
2. Linear Programming .....	23-35
3. Quadratic Programs and Complementarity .....	37-46
4. Statics and Kinematics .....	47-60
5. Plastic Limit Analysis .....	61-82
6. Piecewise-Linear Elastic-Plastic Stress-Strain Relations .....	83-114
7. Complementarity Problems and Unilateral Constraints .....	115-133
8. Elastic-Plastic Analysis of Structural Cross-Sections .....	135-152
9. Elastoplastic Analysis of Skeletal Structures .....	153-169
10. A Gradient Method for Elastic-Plastic Analysis .....	171-180
11. Plastic Shakedown Analysis .....	181-205
12. Optimal Plastic Design and Software .....	207-229
13. Variational Formulations in Elastic-Plastic Analysis .....	231-253
14. Finite Element Modelling .....	255-291
15. Rigid Plastic Dynamics .....	293-313
16. Bounding Techniques in Plastic Analysis .....	315-348
17. Dynamic Plastic Deformation via Programming .....	349-372
18. Nonlinear Material Behaviour .....	373-386
19. Large Displacement Elastoplastic Analysis .....	387-401
20. Ultimate Load Analysis by Stochastic Programming .....	403-424
21. Fuzzy Linear Programming in Plastic Design .....	425-435
