

# The Mathematics of Finite Elements and Applications V (MAFELAP 1984)

**Editor: J. R. Whiteman**

1. High Speed Inviscid Compressible Flow by the Finite Element Method

O. C. Zienkiewicz, R. Lohner & K. Morgan

2. Finite Element Calculations of Parameters for Singularities in Problems of Fracture

J. R. Whiteman & G. M. Thompson

3. New Solution Procedures for Linear and Non-Linear Finite Element Analysis

M. A. Crisfield

4. Automatic Mesh Generation: A Finite Element / Computer Aided Geometric Design Interface

J. C. Cavendish, D. A. Field & W. H. Frey

5. Finite Element Modelling in an Integrated Computer Aided Design Environment

M. S. Shephard

6. A Method for Determination of Two-Dimensional Field Lines

E.-M. Salonen, R. Salminen & J. Aalto

7. Finite Element on the D.A.P.

R. Wait & I. Martindale

8. Design and Implementation of an Efficient Three-Dimensional Finite Element Code for High Temperature Problems

T. J. W. Ward & C. G. Burton
