

CONTENTS

CHAPTER 1	
INTRODUCTION	1
1.1 Scope of topic, 1	
1.2 Hydrogeology and human affairs, 3	
1.3 History of hydrogeology, 5	
CHAPTER 2	
THE HYDROLOGIC CYCLE	15
2.1 Introduction, 15	
2.2 Precipitation, 17	
2.3 Evapotranspiration, 18	
2.4 Runoff, 23	
2.5 Infiltration, 33	
2.6 Subsurface movement of water, 39	
2.7 Discharge of ground water, 61	
CHAPTER 3	
PHYSICAL AND CHEMICAL PROPERTIES OF WATER	71
3.1 The water molecule, 71	
3.2 Physical properties of water, 74	
3.3 Dissociation, 74	
3.4 Methods of expressing analysis, 77	
3.5 Specific electrical conductance, 83	
3.6 Mobility of the elements in the hydrosphere, 85	
CHAPTER 4	
WATER QUALITY	96
4.1 Introduction, 96	
4.2 Dissolved constituents, 100	
4.3 Suspended material, 117	
4.4 Classification of water, 118	

x CONTENTS

CHAPTER 5

RADIONUCLIDES IN GROUND WATER 129

5.1 Introduction, 129 5.2 Units of measurement, 130 5.3 Permissible doses of radiation, 131 5.4 Natural radionuclides in ground water, 134 5.5 Man-made concentrations of radionuclides, 141

CHAPTER 6

ELEMENTARY THEORY OF GROUND-WATER FLOW 156

6.1 Darcy's law, 156 6.2 Major subdivisions of ground-water flow, 159 6.3 Rock and soil composition, 160 6.4 Hydraulic conductivity, 162 6.5 Pore pressure and intergranular stress; soil-moisture tension; piezometric head; watertable, 166 6.6 The concept of potential, 168 6.7 Range of validity of Darcy's law, 174 6.8 General equation for ground-water flow, 175 6.9 The Dupuit assumptions in unconfined flow, 183 6.10 Capillary forces, 186 6.11 Flow nets, graphical solution of $\nabla^2 h = 0$, 189

CHAPTER 7

APPLICATIONS OF GROUND-WATER FLOW 201

Part A. Well Flow, 201 7.1 Steady radial flow to a well, 201 7.2 Steady flow to several wells, 205 7.3 Flow between a well and a recharge well (Figure 7.5a), 207 7.4 Method of images, 210 7.5 Radial flow to a well in an extensive confined aquifer, 213 7.6 Boundary effects on unsteady well flow, 223 7.7 Flow through semipervious strata; leaky aquifers, 224 7.8 Determination of the formation constants of leaky aquifers, 226 Part B. Multiple-phase flow, 229 7.9 Movement of oil and gas under hydrodynamical conditions, 229 7.10 Salt-water encroachment, 237. Part C. Experimental methods in ground-water flow, 241 7.11 Parallel-plate analog or Hele-Shaw apparatus, 241 7.12 Resistance-capacitance network analogs, 247 7.13 Electrical-resistance network, 252 7.14 Conductive-liquid and conductive-solid analogs, 254 7.15 Other analogs, 257

CHAPTER 8

EXPLORATION FOR GROUND WATER 260

8.1 Introduction, 260 8.2 Geologic methods, 264 8.3 Hydrologic methods, 265 8.4 Surface geophysical methods, 269 8.5 Test drilling, 286 8.6 Drilling and excavating equipment, 287 8.7 Geologic logs, 293 8.8 Geophysical logs, 298

CHAPTER 9	
GROUND WATER IN IGNEOUS AND METAMORPHIC ROCKS	318
9.1 Introduction, 318 9.2 Metamorphic and plutonic igneous rocks, 319 9.3 Volcanic rocks, 333	
CHAPTER 10	
GROUND WATER IN SEDIMENTARY ROCKS	346
10.1 Introduction, 346 10.2 Rock types and bed thicknesses, 347 10.3 Porosity and permeability, 347 10.4 Well yields, 355 10.5 Ex- ploration for ground water, 359 10.6 Limestone caverns, 365 10.7 Ground-water management, 369 10.8 Water quality, 369	
CHAPTER 11	
GROUND WATER IN NONINDURATED SEDIMENTS	374
11.1 Introduction, 374 11.2 Porosity, permeability, and specific yield, 374 11.3 River valleys, 381 11.4 Valleys of tectonic origin, 390 11.5 Coastal plains, 401 11.6 Regions of eolian deposits, 406 11.7 Glaciated terrain, 408 11.8 Regions of miscellaneous deposits, 414	
CHAPTER 12	
GROUND WATER IN REGIONS OF CLIMATIC EXTREMES	418
12.1 Introduction, 418 12.2 Regions of exceptionally high precipi- tation, 419 12.3 Ground water in arid regions, 421 12.4 Ground water in regions of perennially frozen ground, 433	
APPENDIX	
USEFUL CONVERSION FACTORS	445
