

Table of Contents

1. Number Systems and Codes

- Decimal, Binary, Octal, and Hexadecimal Systems
- Number Base Conversions
- Binary Codes (BCD, Gray, ASCII, Excess-3)
- Error Detection Codes

2. Boolean Algebra and Logic Simplification

- Boolean Laws and Theorems
- De Morgan's Theorems
- Logic Function Simplification
- Karnaugh Maps (K-Maps)

3. Logic Gates

- Basic Logic Gates
- Universal Gates (NAND and NOR)
- Exclusive Gates (XOR and XNOR)
- Logic Gate Implementations

4. Logic Families

- TTL Logic Family
- CMOS Logic Family
- Electrical Characteristics
- Performance Comparison

5. Arithmetic Circuits

- Half Adders and Full Adders
- Binary Subtractors
- Parallel Adders
- Arithmetic Logic Unit (ALU)

6. Combinational Logic Circuits

- Multiplexers and Demultiplexers
- Encoders and Decoders
- Comparators
- Code Converters

7. Flip-Flops and Latches

- SR Latch
- JK Flip-Flop
- D Flip-Flop
- T Flip-Flop
- Timing Considerations

8. Counters

- Asynchronous Counters
- Synchronous Counters
- Ring Counters
- Johnson Counters
- Modulo-N Counters

9. Registers and Shift Registers

- Data Registers
- Shift Registers
- Serial and Parallel Data Transfer
- Register Applications

10. Memory Devices

- RAM and ROM
- PROM, EPROM, and EEPROM
- Memory Organization
- Memory Applications

11. Programmable Logic Devices

- PLA
- PAL
- CPLD
- FPGA Fundamentals

12. Sequential Circuit Design

- State Diagrams
- State Tables
- Finite State Machines (FSM)
- Sequential Circuit Analysis

13. Analog-to-Digital and Digital-to-Analog Conversion

- ADC Fundamentals
- DAC Fundamentals
- Conversion Techniques
- Practical Applications

14. Clock Generation and Timing Circuits

- Clock Signals
- Oscillators
- Timing Constraints
- Synchronization Techniques

15. Hardware Description Languages

- Introduction to HDL
- Digital Circuit Modeling
- Simulation and Verification
- Design Methodologies

16. Applications of Digital Systems

- Microprocessor-Based Systems
- Embedded Systems
- Communication Systems
- Industrial Automation
