

Table of Contents

Chapter 1 – Fundamentals of Optoelectronics

- Nature of light
- Electromagnetic spectrum
- Optical properties of materials
- Interaction of light with matter

Chapter 2 – Semiconductor Physics for Optoelectronics

- Energy band theory
- Intrinsic and extrinsic semiconductors
- Carrier transport mechanisms
- PN junction fundamentals

Chapter 3 – Optical Sources

- Light Emitting Diodes (LEDs)
- Double heterojunction LEDs
- Laser principles
- Semiconductor lasers
- Laser characteristics and applications

Chapter 4 – Optical Detectors

- Photoconductors
- PIN photodiodes
- Avalanche photodiodes (APD)
- Phototransistors
- Detector performance parameters

Chapter 5 – Fibre Optics Fundamentals

- Optical fibre structure
- Light propagation in fibres
- Total internal reflection
- Numerical aperture
- Acceptance angle
- Modes of propagation

Chapter 6 – Optical Fibre Communication Systems

- Fibre optic communication links
- Optical transmitters and receivers
- Signal transmission techniques
- Link power budget
- System design considerations

Chapter 7 – Optical Fibre Characteristics

- Attenuation mechanisms
- Dispersion phenomena
- Pulse broadening
- Fibre losses and limitations

Chapter 8 – Optical Components and Couplers

- Connectors and splices
- Directional couplers
- Optical switches
- Power launching techniques

Chapter 9 – Fibre Optic Sensors

- Intensity-modulated sensors
- Phase-modulated sensors
- Temperature and pressure sensors
- Industrial and biomedical applications

Chapter 10 – Optoelectronic Integrated Circuits (OEIC)

- Integration concepts
- Optoelectronic devices
- Hybrid and monolithic integration
- System applications

Chapter 11 – Solar Cells and Photovoltaic Devices

- Solar cell principles
- Photovoltaic conversion
- Efficiency considerations
- Applications of solar energy

Chapter 12 – Advanced Fibre Optic Communication

- Optical modulation techniques
- Electro-optic effect
- Modern communication systems
- Emerging fibre optic technologies
