

Table of Contents

1. Introduction

- Basic concepts of heat and mass transfer
- Modes of heat transfer
- Thermal energy and conservation principles
- Engineering applications

2. Introduction to Conduction

- Fourier's law of heat conduction
- Thermal conductivity
- General heat diffusion equation
- Boundary and initial conditions

3. One-Dimensional, Steady-State Conduction

- Plane walls
- Cylinders and spheres
- Thermal resistance concept
- Composite systems
- Extended surfaces (fins)

4. Two-Dimensional, Steady-State Conduction

- Analytical solutions
- Numerical methods
- Shape factors
- Finite-difference techniques

5. Transient Conduction

- Lumped capacitance method
- One-dimensional transient conduction
- Heisler charts
- Semi-infinite solids

6. Introduction to Convection

- Convective heat transfer principles
- Boundary layer concepts
- Newton's law of cooling
- Dimensionless parameters

7. External Flow

- Laminar and turbulent boundary layers
- Flow over flat plates
- Flow across cylinders and spheres
- Empirical correlations

8. Internal Flow

- Flow in tubes and ducts
- Fully developed flow
- Heat transfer correlations
- Pressure drop and friction

9. Free (Natural) Convection

- Buoyancy-driven flow
- Natural convection correlations
- Combined forced and free convection

10. Boiling and Condensation

- Pool boiling
- Flow boiling
- Condensation mechanisms
- Heat transfer coefficients

11. Heat Exchangers

- Types of heat exchangers
- Overall heat transfer coefficient
- LMTD method
- Effectiveness–NTU method
- Heat exchanger design

12. Radiation: Processes and Properties

- Thermal radiation fundamentals
- Blackbody radiation
- Surface properties
- Radiation laws

13. Radiation Exchange Between Surfaces

- View factors
- Radiation networks
- Enclosure analysis
- Radiation shields

14. Diffusion Mass Transfer

- Diffusion mechanisms
- Fick's law
- Convective mass transfer
- Analogies between heat and mass transfer
- Simultaneous heat and mass transfer

Appendices

- Thermophysical properties of materials
- Mathematical relations
- Heat generation solutions
- Transient conduction charts
- Convection equations
- Boundary-layer solutions
