

Table of Contents

1. **Introduction to Mechanical Design**
 - Nature and objectives of design
 - Product development cycle
 - Design methodology
2. **Product Planning and Problem Definition**
 - Customer needs analysis
 - Engineering specifications
 - Design requirements
3. **Conceptual Design**
 - Idea generation techniques
 - Functional decomposition
 - Concept evaluation and selection
4. **Decision-Making in Design**
 - Selection matrices
 - Trade-off analysis
 - Risk assessment
5. **Embodiment Design**
 - Product architecture
 - Configuration development
 - Design for manufacturability and assembly
6. **Engineering Analysis and Optimization**
 - Performance evaluation
 - Mathematical modeling
 - Optimization methods
7. **Material and Process Selection**
 - Material properties
 - Manufacturing processes
 - Economic considerations
8. **Detail Design**
 - Tolerances and fits
 - Standard components
 - Documentation and drawings
9. **Design Communication**
 - Technical reports
 - Engineering drawings
 - CAD tools and documentation
10. **Product Evaluation and Testing**
 - Prototyping
 - Verification and validation
 - Reliability considerations
11. **Design Project Management**
 - Teamwork
 - Scheduling and planning
 - Design reviews
12. **Contemporary Design Issues**
 - Sustainability
 - Quality engineering
 - Product lifecycle management
