

Table of Contents

1. **Introduction to Electromagnetics**
 - Physical foundations of electromagnetic phenomena
 - Units and vector mathematics
2. **Vector Analysis**
 - Coordinate systems
 - Gradient, divergence, and curl
 - Line, surface, and volume integrals
3. **Electrostatic Fields**
 - Coulomb's law
 - Electric field intensity
 - Electric potential and energy
4. **Electric Flux Density and Gauss's Law**
 - Flux concepts
 - Dielectric materials
 - Boundary conditions
5. **Capacitance and Electrostatic Applications**
 - Capacitors
 - Energy storage
 - Practical devices
6. **Magnetostatic Fields**
 - Magnetic field intensity
 - Biot-Savart law
 - Ampère's law
7. **Inductance and Magnetic Materials**
 - Self and mutual inductance
 - Magnetic circuits
8. **Time-Varying Electromagnetic Fields**
 - Faraday's law
 - Displacement current
 - Electromagnetic induction
9. **Maxwell's Equations**
 - Integral and differential forms
 - Electromagnetic field relationships
10. **Plane Wave Propagation**
 - Uniform plane waves
 - Reflection and transmission
 - Polarization
11. **Transmission Lines**
 - Transmission-line theory
 - Impedance matching
 - Smith chart applications
12. **Waveguides**
 - Wave propagation in guides
 - TE and TM modes
 - Rectangular waveguides

13. Antennas

- Radiation principles
- Dipole antennas
- Antenna parameters

14. Electromagnetic Interference (EMI)

- Sources of interference
- Shielding techniques
- Compatibility issues

15. Microwave Engineering Applications

- Microwave devices
- Wireless communication systems
- Engineering applications of electromagnetics
