

Thermal Engineering

Table of Contents

1. Introduction to Thermal Engineering

- Basic concepts and definitions
- Systems, surroundings and processes
- Properties of thermodynamic systems
- Units and dimensions

2. Fundamentals of Thermodynamics

- Zeroth law of thermodynamics
- First law of thermodynamics
- Second law of thermodynamics
- Entropy and reversibility
- Thermodynamic processes

3. Properties of Pure Substances

- Properties of gases, liquids and vapours
- Phase changes
- Steam tables
- Mollier diagram
- Thermodynamic property relations

4. Thermodynamic Cycles

- Carnot cycle
- Otto cycle
- Diesel cycle
- Dual combustion cycle
- Brayton and Rankine cycles

5. Steam and Steam Generators

- Formation and properties of steam
- Boilers and boiler components
- Boiler mountings and accessories
- Boiler efficiency
- Boiler performance testing

6. Steam Turbines

- Principles of steam turbines
- Impulse turbines
- Reaction turbines
- Compounding

- Turbine performance

7. Internal Combustion Engines

- Classification of IC engines
- Engine components and operation
- Four-stroke and two-stroke engines
- Petrol and diesel engines
- Engine performance and testing

8. Gas Turbines

- Basic principles
- Open and closed gas turbine cycles
- Brayton cycle
- Components of gas turbines
- Gas turbine performance

9. Compressors

- Reciprocating compressors
- Rotary compressors
- Centrifugal compressors
- Multistage compression
- Compressor performance

10. Heat Transfer

- Modes of heat transfer
- Heat conduction
- Convection
- Thermal radiation
- Heat exchangers

11. Refrigeration

- Principles of refrigeration
- Vapour-compression refrigeration
- Vapour-absorption refrigeration
- Refrigerants
- Refrigeration system performance

12. Air Conditioning

- Psychrometric properties
- Psychrometric processes
- Air-conditioning systems
- Cooling and heating loads
- Comfort air conditioning

13. Power Plants

- Steam power plants
- Hydroelectric power plants
- Gas turbine power plants
- Nuclear power plants
- Combined-cycle power plants

14. Renewable and Alternative Energy

- Solar thermal energy
- Biomass energy
- Geothermal energy
- Wind energy
- Waste-heat recovery

15. Energy Management and Efficiency

- Energy conservation
- Thermal efficiency
- Energy auditing
- Cogeneration
- Environmental aspects of thermal systems

Pertinent summary: Thermal Engineering deals with the fundamental principles and practical applications of thermodynamics, heat transfer, steam generation, turbines, internal combustion engines, gas turbines, compressors, refrigeration, air conditioning, and thermal power plants.
