

Contents

- 1. Introduction to Units and Measurement**
 - Role of units in science, engineering and everyday life
 - Importance of standardized measurement
- 2. Systems of Units**
 - Metric system
 - British and American customary units
 - International systems of measurement
 - Relationship between different systems
- 3. The International System of Units (SI)**
 - Fundamental/base units
 - Derived units
 - Definitions and symbols
 - Coherent structure of the SI
- 4. Multiples and Submultiples of Units**
 - Metric prefixes
 - Powers of ten
 - Practical use of prefixes
- 5. Commonly Used Physical and Engineering Units**
 - Units of length, area and volume
 - Mass and force
 - Time and frequency
 - Temperature
 - Energy and power
 - Electrical and magnetic quantities
- 6. Conversion of Units**
 - Principles of unit conversion
 - Conversion factors
 - Conversion charts
 - Conversion between metric and non-metric units
- 7. Electrical Units**
 - Volt, ampere, ohm and watt
 - Coulomb, joule, farad, henry, weber and tesla
 - Relationships among electrical quantities
- 8. Mechanical and Thermal Units**
 - Force, pressure, work and energy
 - Heat and temperature
 - Mechanical–electrical relationships
- 9. The Per-Unit System**
 - Purpose of per-unit quantities
 - One-base system
 - Two-base system
 - Applications in engineering calculations
- 10. Conversion Tables and Reference Material**
 - Numerical conversion factors

- Engineering reference tables
- Index
